Preface

Read the *Release Notes* to learn about fixes and known limitations for MDM - Reference 360.

For information about new features and enhancements, see *What's New*.

MDM - Reference 360

Fixed issues

The following table describes the Reference 360 fixed issues. Not all monthly releases include fixed issues. The (<release>) value in each issue description represents the release in which the issue was fixed.

Issue	Description
RDMNEX-13501	When you select a reference data set from the **Explore** panel, click the **Stakeholder** tab, and then open the reference data set, the delete option doesn't appear against the stakeholders. (April 2024)
RDMNEX-12053	When you configure basic rule associations with the **Left Trim** or **Right Trim** functions for a code attribute in a code list, the reference data import job doesn't load code values into the code list. (April 2024)

Issue	Description
RDMNEX-11657	When you save a code value after you clear the default value of a date field and update other fields, Reference 360 doesn't persist the default value in the date field. (April 2024)
RDMNEX-10673	After you submit a crosswalk for approval, the following issues occur: - If an approver clicks **View Draft Version**, the crosswalk opens in read-only mode instead of the draft version of the crosswalk. - If an approver clicks **Compare with Published version**, the **Compare Versions** dialog box doesn’t display the changes in the crosswalk. (April 2024)
MDMN-91962	When you add an advanced rule association to concatenate two fields that contain more than 100 characters for the **Code** attribute, the rule output displays the first 100 characters of the fields. (April 2024)
RDMNEX-13510	When you add a value to the system reference data, the save and cancel options appear only if you hover over the specific area where the options are available. (February 2024)
RDMNEX-13408	You can't delete a reference data attribute if a code list that uses the reference data attribute has the Reference 360 User role as a stakeholder. (February 2024)
RDMNEX-12756	When you provide the default value for an input field in an advanced rule association for a code list attribute, the file import job fails at the transform step. (February 2024)
RDMNEX-12739	If a reference data asset is referenced in a picklist field of a business entity, you can't add or delete stakeholders to the reference data asset. (February 2024)
RDMNEX-12045	When you import code values with source primary keys that exceed 300 characters, the import job fails with an error. (February 2024)
MDMN-115457	If a user with the Reference 360 Stakeholder role locks a code list, the user can import code values and send the changes for approval even though the user doesn't have the privilege to perform an import operation. (February 2024)
RDMNEX-11898	After you delete a code value from a code list, if you add the same code value to the code list, the **Compare Versions** dialog box doesn't display the changed code values. (February 2024)
RDMNEX-11648	When you edit the existing code values after setting default values for attributes, you can view the default values for the attributes that had no values. If you save the code value without updating any other field, Reference 360 clears the default value for the attribute. Workaround: To view the default value, edit any field and then save the code value. (February 2024)

Issue	Description
RDMNEX-11489	When you configure a display attribute and set a default value for a reference data attribute, Reference 360 displays an incorrect default value. (February 2024)
RDMNEX-11479	When you set a default value and configure data quality rule associations for an attribute in a code list, Reference 360 ignores the default value and persists the rule statement output. (February 2024)
RDMNEX-12158	When a code list name exceeds 32 characters, Reference 360 doesn't render the full name of the code list and displays additional blank spaces in the **Explore** panel. (February 2024)
RDMNEX-12034	Reference 360 doesn't display any notification in your inbox after an import job is complete. (February 2024)
RDMNEX-12007	When you set the default value for an integer type attribute to `0`, Reference 360 doesn't persist the default value. (February 2024)
RDMNEX-10643	An idle Reference 360 session doesn't timeout even after the session idle timeout period. (February 2024)
MDMN-115457	A user with the Reference 360 stakeholder role can lock the code list and import code values into the code list even though the user doesn't have the privilege to import. (February 2024)
RDMNEX-11181	When you refresh the **Explore** panel, Reference 360 might display code lists that you don't have access to. (January 2024)
RDMNEX-11112	When you add or import code values, if a decimal data type attribute contains scale value greater than or equal to 10, Reference 360 displays the value in its exponential format. (December 2023)
MDMN-99204	When you try to import related code values into a hierarchy, if the input file doesn't contain the source primary key details for the relationships, a preview error appears. Workaround: Configure the source primary key values in the input file, and try again. (December 2023)
MDMN-120285	When you add a basic rule association without entering a value for the required Name field, Reference 360 saves the rule association instead of displaying an error. (November 2023)
RDMNEX-11073, RDMNEX-11425	When you edit a code value, you can't clear the selected value for the reference data type attributes. Workaround: Delete the code value and add it again. (November 2023)

Issue	Description
RDMNEX-11206	When you create a child code value in a hierarchical code list by copying the values from the parent code value, the reference data type attribute doesn't display any value. (October 2023)
RDMNEX-11071	After you set dependency for a reference data attribute, if you modify the selected reference data set and code list, Reference 360 doesn't reset the value in the **Dependent On** field. (October 2023)
RDMNEX-11014	When you try to change the data type of the code attribute of a reference data set from string to integer, an internal error occurs. (October 2023)
RDMNEX-11243	On the **Summary** tab of a code value, an integer type attribute with the value 0 is displayed as a null value. (September 2023)
RDMNEX-11081	Reference 360 displays advanced rule associations of code list attributes even though the rule specifications are deleted from Cloud Data Quality. When you export code lists that contain the attributes, the export fails. (September 2023)
MDMN-112671	You can't import code values. The import job fails at the Index for Search step with an internal error. (August 2023)
MDMN-110739	When you import a CSV file that contains line breaks in any of the columns, the import fails. (August 2023)
RDMNEX-11021	Reference 360 users assigned with a stakeholder role for an asset can't view the details of the asset. (August 2023)
RDMNEX-10649	When you use the OpenAPI 3.0 json file to create a service connector, an error occurs. (August 2023)
RDMNEX-10031	When you add a code list with a large number of code values as a reference data attribute of another code list, the **New Code Value** page doesn't display the code values of the referenced code list. (August 2023)
MDMN-101265	When you test a basic rule association for string attributes, the condition displays the function with incorrect or missing input fields. (July 2023)
RDMNEX-4204	When you delete code values used as reference data attributes in draft code lists, a warning message does not appear. (April 2020)

Issue	Description
RDMNEX-10311	When you use the export model API to export reference data sets that don't contain a cyclic dependency, the export fails with the following error: `The model includes cyclic dependencies, so no order can be determined.` (June 2023)
MDMN-102179	Custom user roles assigned with the same privileges as a predefined user role in the Administrator service can't view the assets in Reference 360. (April 2023)
MDMN-93621	Users assigned with the Admin user role through a custom user group in the Administrator service can't view the **My Jobs** tab in Reference 360. (April 2023)
RDMNEX-9671	Users assigned with a Reference 360 Business Steward stakeholder role for a code list and its associated crosswalks can't delete value mappings of the crosswalks. (April 2023)
RDMNEX-9053	When you export code values of a code list, if a code value has a recursive relationship, an incorrect error message appears instead of displaying the name of the code value with the recursive relationship. (April 2023)
RDMNEX-9505	When you use the import model API to import a code list with a basic concatenate rule, you can't view the attribute associated with the rule in the target organization. (March 2023)
RDMNEX-9374	When you import code values to a code list that contains an advanced rule association with a Boolean field as the output field, the import fails. (February 2023)
RDMNEX-9426	After you add a row to the external URLs or notification recipients, if you switch to a different workspace, you can't view the added row. If you try to add a row, an error message appears. (January 2023)
RDMNEX-9076	You can edit the value of the **Code** attribute even after you define a basic rule association for it. (December 2022)
MDMN-86682	When a code list contains more than 10,000 code values, if you filter the code values and select a code value from the filtered list, the page doesn't load. (November 2022)
MDMN-84647	The export API might not return display attribute values for a reference or dependent attribute when the data type is boolean or integer. The issue occurs if the value of the **addLabelsForReferenceAttribute** field is `true`. (November 2022)

Issue	Description
MDMN-84245	The export API doesn't return the reference attributes that are nested beyond the second level. The issue occurs when you export code lists for a specific point in time. (November 2022)
RDMNEX-7961	When you try to add a value to a required field that is set as an output field of an advanced rule association, on the **New Code Value** page, a validation error message appears before the rule runs. (November 2022)
RDMNEX-8409	When you edit code values of a code list and publish the code list, the code value details panel appears in edit mode. (September 2022)
RDMNEX-7997	If rule set names in advanced rule associations contain a space, you get an error message when you save a code list that uses the rule. (September 2022)
RDMNEX-8342	Users with the Reference 360 Primary Owner role can't delete code values of a draft code list. (August 2022)
RDMNEX-6804	In draft code lists, edited code values are not updated, and the updated indicator does not appear. (August 2022)
RDMNEX-8060	Users with the Business Analyst roles can view the **Add Approval Task** button on the **Workflow** tab of a code list even though they don't have the required privilege to view it. (June 2022)
RDMNEX-8022	When a user with the Business Analyst role opens the **Workflow Inbox** page by using a bookmarked URL, the page does not appear correctly. (June 2022)
RDMNEX-8009	When you view the history feed of assets using filters and then clear the applied filters, the history feed continues to display the filtered results. (June 2022)
RDMNEX-7998	The Domain, Confidentiality, and Priority fields do not appear on the **Summary** tab of default code lists. (June 2022)
RDMNEX-7503	After you modify the definition of a code list, you can't add the same code values to the attributes of the code list. (June 2022)
RDMNEX-6894	When you configure a concatenate rule for any attribute of a code list, clicking **Add Input** resets the values of other fields. (June 2022)

Issue	Description
RDMNEX-2472 MDMN-15373	When you try to publish a code list that contains a large amount of values, the following error occurs: `Failed to change draft state` (June 2022)
RDMNEX-7874	On the **Home** page, the tile name and title of what's new video for the April release appear incorrectly as What's new in December 2021 instead of What's new in April 2022. (May 2022)
RDMNEX-7789	When you filter the history feed of a reference data set or a hierarchy by current date, the filter results don't display any event. (May 2022)
RDMNEX-7471	When you open the code list after you publish or discard the draft code list, the **Import Values** icon doesn't appear. (April 2022)
RDMNEX-7432	When you filter or sort the job instances that appear on multiple pages on the **My Jobs** page, you do not get the expected results. When you sort the job schedules by status, the sorted results appear incorrectly. (April 2022)
RDMNEX-7414	If you open the code list from the **Explore** page after you update the code list and save the changes, the code list doesn't display the updated values. (April 2022)
RDMNEX-5068 MDMN-38371	If you delete a code value and publish the change, when you add the same code value and publish the change, the **History** tab shows the delete event but does not show the create event. (January 2022)

Known issues

The following table describes the Reference 360 known issues in this release. The (<release>) value in each issue description represents the release in which the issue was reported.

Issue	Description
RDMNEX-12692	When you configure an advanced rule association for an attribute and if the rule uses a single field as input and output, Reference 360 disables the attribute. Workaround: Ensure that you configure a rule association that doesn't use a single field as input and output. (February 2024)
RDMNEX-12688	Reference 360 doesn't run the basic and advanced rule associations with transformation functions on the default value that you set for the code list attributes. (February 2024)

Issue	Description
RDMNEX-11886	When you create a mapping with a Business 360 connection in Cloud Data Integration, the **Select Source Object** page doesn't display Reference 360 assets if the Secure Agent name contains spaces. Workaround: Ensure that the Secure Agent name doesn't contain spaces. (November 2023)
RDMNEX-11926	When you define the scale value greater than or equal to the default precision value for a decimal data type attribute, Reference 360 doesn't display any error message. (October 2023)
MDMN-120973	After you change the license of an organization from full license to Reference Data Management Basic Edition license, if you create a mapping in Cloud Data Integration, you can view hierarchies of the organization with full license. (October 2023)
MDMN-113955	The step metrics of the Reference 360 jobs display the internal ID of the assets instead of the asset name. (August 2023)
RDMNEX-10917	You can't use the asset optimization job in Reference 360 because of the following issue: When you delete predefined or custom reference data attributes and save the code list, Reference 360 doesn't save the code list. (July 2023)
RDMNEX-9585	If a code list has the `REINDEX_REQUIRED` status during code value import, the job fails in the **Index for Search** step. Workaround: You must reindex the code list for the import job to run successfully. To reindex the code list, contact Informatica Global Customer Support. (April 2023)
RDMNEX-9488	After you rename any imported asset in an organization and then import any of the previously imported assets, the import fails because of overlapping IDs of assets. (December 2022)
RDMNEX-7206	When you add value mappings in a crosswalk by selecting the deleted code values of a draft code list and then publish the code list, the API response ignores the deleted code values and displays the mappings for the crosswalk created using the draft code list. (December 2021)

MDM - Reference 360 Extension

Fixed issues

The following table describes the fixed issues for the Reference 360 extension. Not all monthly releases include fixed issues. The (<release>) value in each issue description represents the release in which the issue was fixed.

Issue	Description
CNXT-1422	The Controlling Area attribute of R360: Standard Cost Center Hierarchy reference data set doesn't display the values from the SAP source system. The values appear incorrectly for the hierarchies of the reference data set. (January 2023)
CNXT-1398	The Description attribute of the R360: Standard Cost Center Hierarchy reference data set doesn't integrate with source systems. (December 2022)

Known issues

The following table describes known limitations in the Reference 360 extension:

Issue	Description
CNXT-1615	The Description attribute of leaf nodes don't appear for the R360: Standard Cost Center Hierarchy reference data set. Workaround: Manually add the description in Reference 360. (February 2023)

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
