Read the *Data Integration Release Notes* to learn about known limitations and third-party limitations for Data Integration. For limitations regarding a connector, see the connector release notes.

For information about new features and enhancements, see *What's New*.

Fixed issues

The tables in this section describe recent fixed issues for Informatica Intelligent Cloud ServicesSM Data Integration. Note that some releases might not include fixes.

April 2024 fixed issues

Issue	Description
CLDDI-28803	If you parameterize an expression in a mapping in advanced mode and specify a function in the mapping task that isn't available in advanced mode, the mapping task incorrectly validates the expression. If you run the mapping task, the job fails.
CLDDI-27662	Mapping tasks fail at run time when all the following conditions apply: <ul style="list-style-type: none"> - The task is based on a mapping in SQL ELT mode. - The source and target connections and objects are parameterized. - In the mapping task, the source type is set to "Query," and you enter a custom query.
CLDDI-27461	Validation fails for a mapping task in which all the following conditions apply: <ul style="list-style-type: none"> - The task is based on a mapping in SQL ELT mode. - The source and lookup connections and objects are parameterized. - Any field names in the lookup condition are identical to each other or to a source field name.
CLDDI-26612	When you run a mapping task that is based on a mapping in SQL ELT mode, the job details page displays the target name in the individual source and target results as "Target (Target1)" instead of including the actual target name inside the parentheses. If there are multiple targets in the mapping, the success rows and error rows displayed for "Target (Target1)" are cumulative for all targets.

February 2024 fixed issues

Issue	Description
CLDDI-14201	When you create a mapping task using the new mapping task editor, you can't create an advanced relationship for the parameterized source objects.
TF-2304	When a taskflow that contains multiple parallel tasks is configured to send an email on suspension, an email is sent for each failed or suspended task. This results in multiple email notifications to the recipients.

January 2024 fixed issues

Issue	Description
POP-49859	If you save changes that you made to an asset that's checked out and then undo the checkout, the changes aren't reverted. If you undo the checkout using an undoCheckout API request, you'll receive an error message. However, if you undo the checkout in the user interface, you won't receive an error message and the action will appear to be successful in the source control log.

November 2023 fixed issues

Issue	Description
CBDM-30060	When you monitor a dynamic mapping task and drill down on an individual job, the page stops responding.
TF-3760	When the scheduler fails to trigger the scheduled taskflow job for the first time, the scheduler service doesn't perform a retry.

Known issues

The tables in this section describe known issues for Informatica Intelligent Cloud ServicesSM Data Integration. Not all monthly releases include known issues.

April 2024 known issues

Issue	Description
CLDDI-31444	When you parameterize the lookup expression for an unconnected Lookup transformation in a mapping in SQL ELT mode, and the expression passes an integer or decimal value, the mapping task displays a validation error saying that the argument data types aren't valid.
ISD-5321	When you use an intelligent structure model based on a Cobol copybook in a Structure Parser transformation, the output file is invalid if the transformation processes file types other than binary files.
ISD-5286	If you change the name or data type of an element in an intelligent structure model, the order of the elements in the output groups changes.

February 2024 known issues

Issue	Description
CDAM-1242	If a user has changed the columns in a data source, you must re-run catalog extraction of that data source in Metadata Command Center. Otherwise null values for all target columns can result when you run a mapping with that data source in Data Integration.
CDAM-1224	When you run a mapping in Data Integration when an Oracle database source includes the BLOB data type, the following error appears: Failed to create the following transformation: 'AccessPolicy' (500 : [no body])
POP-53378	When you import assets in Data Integration, schedules aren't displayed in the Import Assets dialog box. However, the schedules are imported when you click Import .

January 2024 known issues

Issue	Description
TF-4652	The My Jobs page in Data Integration and the All Jobs and Running Jobs pages in Monitor display the taskflow start time and end time values based on the time zone setting in the user profile. However, when you open a taskflow instance, the values in the Start time and End time fields appear in Coordinated Universal Time (UTC) regardless of the time zone setting in the user profile.

November 2023 known issues

Issue	Description
CBDM-32292	When you run a mapping task based on a mapping in SQL ELT mode, and the mapping contains a field with the same name as a Snowflake function or data type, the mapping task fails with a parsing error like the following error: ERROR [[<PM Parse Error>> invalid token
... $<<<<ATE] WARNING []
CLDDI-29573 CBDM-32720	User-defined functions with the same name as a built-in function will cause a mapping in advanced mode to fail when that function is used in an expression. Workaround: Rename the user-defined function to a unique name.
CLDDI-29185 CBDM-31594	If you enable CLAIRE-powered runtime strategies in a mapping task, you can't edit the SQL ELT optimization properties on the Runtime Options page if CLAIRE recommendations or the FinOps license is disabled in your organization. Workaround: Open the mapping task and change the runtime strategy to the default runtime strategy. Then, save it.

Issue	Description
CLDDI-27555	If you override the source, target, or lookup connection in a taskflow that includes a mapping task that is based on a mapping in SQL ELT mode, the task fails when you run the taskflow.
CLDDI-27253	<p>When you create a mapping in SQL ELT mode that contains an Expression transformation with nested variable fields and you declare the variables in the wrong order, the mapping task fails at runtime with a mapping compilation error. For example, the mapping task fails if the Expression transformation contains variable field V1 followed by field V2, but V1 uses V2 in its expression.</p> <p>Workaround: Reorder the variable fields so that each variable is resolved before it is used. For example, if V1 uses V2 in its expression, then make sure V2 is listed first.</p>

For information about new features and enhancements, see *What's New*.

For information about supported operating systems for the Secure Agent, PODs, supported browsers, localization support, and connector support, see the Product Availability Matrix (PAM) for Informatica Intelligent Cloud Services and the Informatica Connectivity PAM on Informatica Network:

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at <https://www.informatica.com/services-and-training/support-services/contact-us.html>.
