Informatica® Cloud Application Integration
April 2024
Release Notes

Contents

Read the Informatica Intelligent Cloud Services℠ *Application Integration Release Notes* to learn about fixed issues and known issues. For information about new features and enhancements, see *What's New*.

Fixed issues

The following table describes the Informatica Intelligent Cloud Services℠ Application Integration fixed issues. Not all monthly releases include fixed issues. The (<release>) value in each issue description represents the release in which the issue was fixed.

Issue	Description
ICAI-43087	If a process contains an output field of the Number type and has a precision greater than 7, it gets converted into the exponential format for XML payloads. (April 2024 release)
ICAI-42129	In the key-value pair in the JSON body in a service connector, if the key contains any special character except underscore (_), the character is removed from the response payload. Similarly, if the value starts with the @ character, the character is removed from the response payload. (April 2024 release)
ICAI-41637	When you create a process using the Service step or Assignment step, after you invoke the process, the step details such as input fields and output fields are not displayed on the **My Processes** page in Application Integration. (February 2024 release)
ICAI-41493	When you create a process input field or temporary field using the Salesforce object, and assign the field source value as query in the Assignment step, if you choose the object as **Account > Type**, there are no values available in the **Conditions** dialog box for selection. (February 2024 release)
ICAI-40604	When you change the input field type in a previously saved service connector, the changes do not reflect in the process that uses the service connector. (February 2024 release)
ICAI-39997	If you create an action in a service connector with basic authentication and the password contains an ampersand (&) character, when you test the service connector, the action fails, and eventually, the service connector fails. However, if you use the same service connector in an app connection and process, the process invocation succeeds. (February 2024 release)
ICAI-39796	When you publish a Kafka connection on the Cloud Server, or start or stop the event sources from the **Connections** page in the Application Integration Console, Application Integration does not update the event source status on the **Event Sources** tab of the connection. (February 2024 release)

Issue	Description
ICAI-39609	If a process contains an output field of the Number type and has a precision greater than 7, it gets converted into the exponential format for JSON responses. (February 2024 release)
ICAI-38467	When you update or delete the input fields in a subprocess or service connector, the changes do not reflect in the process that uses the subprocess or service connector. (February 2024 release)
ICAI-38466	When you change the input field type in a previously saved process object, the changes do not reflect in the Decision step in a process that uses the process object as an input field. (February 2024 release)
ICAI-38294	When the number of steps in a process exceeds the canvas area, you cannot use the mouse pointer to move the process to view the steps beyond the canvas area. (February 2024 release)
HWF-939	When a human task is skipped in the Human Task Inbox of the Human Task service, the Application Integration process fails and does not run the subsequent steps. (April 2023 release)
HWF-887	If a Human Task step is looped more than once in a process using a Jump step, the detailed view in Application Integration Console does not display the general properties of the Human Task step. (April 2023 release)

Known issues

The following table describes general Informatica Intelligent Cloud Services℠ Application Integration known issues in this release. The (<release>) value in each issue description indicates the release in which the issue was reported.

Issue	Description
ICAI-40031	When you run a process with process inputs, the output fields are not displayed in the End step of the process instance. (October 2023 release) Workaround: You can view the output fields in the advanced view of the process.
HWF-863	When you change the task outcome of a previously saved Human Task asset, the changes get automatically reflected in the process that uses the Human Task asset. No message is displayed to the user informing the user about the change in the task outcome. (February 2023 release)
HWF-846	The Human Task step is displayed and allowed for use in a process even for users who are not granted human task related roles in Administrator. (February 2023 release)

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
