# CHAPTER 1

## Version Summer 2018 January

This chapter includes the following topic:

- [New Features and Enhancements, 4](#)

### New Features and Enhancements

The Summer 2018 January release includes the following new feature and enhancement:

#### **JSON Web Token Authentication for Managed APIs**

If a managed Application Integration API uses JSON Web Token (JWT) authentication and is made available in API Portal, you can view the API in API Portal, generate a token, and use the generated token to invoke the API through a REST web service.

For more information about JWT authentication, see the *API Portal Guide*.

#### **API Details Displayed as an Asset**

When you view API details from the API Registry, the details show in a new window, rather than as a dialog box that you must close before proceeding. You can then continue with other API actions, and each API that you view is added to the left-hand side menu of API Manager. You can select an API from that menu to view the details.

For more information about viewing API details, see the *API Portal Guide*.

## CHAPTER 2

# Version Summer 2018 October

This chapter includes the following topic:

- [New Features and Enhancements, 5](#)

## New Features and Enhancements

The Summer 2018 October release includes the following new features and enhancements.

### [Generate SDK Package](#)

You can generate an SDK package and use it to integrate the managed API into your software. SDK packages are available for Java, Android, Javascript, Nodejs, Python, Ruby-on-Rails, C#.NET, ASP.NET5, or C#.

### [Cross-origin Resource Sharing](#)

Cross-origin resource sharing (CORS) is supported for managed APIs. You can call a managed API from a downloaded web page.

# CHAPTER 3

## Version Spring 2018 June

This chapter includes the following topic:

- [New Features and Enhancements, 6](#)

### New Features and Enhancements

The Spring 2018 June release includes the following new features and enhancements.

#### API Analytics

API analytics offers the API Portal user a graphical overview of activity and API usage.

#### Refresh Analytics

You can refresh API analytics to obtain the most current activity statistics.

#### API Testing

When you access API details, you can also examine and test API syntax. You can view request and response syntax, execute a test API command, view codes, and view a sample Curl command and request URL.
