Use the *Data Transformation EDI-X12 Library Release Notes* to learn about new features, installation, fixed limitations, and known limitations of the Data Transformation EDI-X12 library.

For more information about the library, see the *Data Transformation Libraries Guide*.

New Features

The EDI-X12 library release 10.1.1 adds alignment for control numbers in ISA and IEA segments.

Installing the Library

Before you can use a Data Transformation library, you must install it.

Note: If you are running the previous version of the library, you can update the library from the version 10.2.1 .zip file, following the steps described in the Installing Libraries section of the *Data Transformation Libraries Guide*.

1. Copy the library .zip file to your local file system and unzip the file.
2. From the unzipped folder, copy the folder \<lib name>\Developer\DT to the directory
<Install_Dir>\<version>\clients\.

Fixed Limitations

The following table describes fixed limitations:

CR	Description
LIB-6677	If an SE segment does not exist in the input XML the restricted serializer is able to generate it.
LIB-6673	When an invalid TA1 message is run the <code>ErrorsFound.txt</code> is false.
LIB-6660	The HTML call for the 997/TA1 acknowledgement needs to be fixed.

Known Limitations

CR	Description
LIB-125	<p>If the segment separators in a message are followed by newline characters, then the newlines must be used consistently. The library parsers might fail to recognize segments that are missing a newline.</p> <p>Workaround: Insert a newline consistently after every segment separator and at the end of the message. Alternatively, remove the newlines from every segment and from the end of the message.</p>

LIB-125: Segment Separators Must Be Used Consistently

If the segment separators in a message are followed by newline characters, then the newlines must be used consistently. The library parsers might fail to recognize segments that are missing a newline.

Workaround: Insert a newline consistently after every segment separator and at the end of the message. Alternatively, remove the newlines from every segment and from the end of the message.

LIB-5014: Multiple Interchanges Error When Using Different Delimiters

You might encounter parsing errors when you use multiple interchanges with different delimiters.

LIB-5019: Multiple Interchange Error

When a second ISA is not present, Data Transformation processes the project as if there was only one interchange. The second IEA is output at the end of the message.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:

<https://www.informatica.com/services-and-training/customer-success-services/contact-us.html>.

To find online support resources on the Informatica Network, visit <https://network.informatica.com> and select the eSupport option.
