This document contains important information about installation, closed enhancements, fixed limitations, and known limitations for PowerExchange adapters for Informatica.

PowerExchange for Amazon Redshift

PowerExchange for Amazon Redshift (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Amazon Redshift (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Amazon Redshift (10.2)

PowerExchange for Amazon Redshift Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-8020	<p>If you import an Amazon Redshift table that has a question mark (?) in the column name, the read and write operations fail with the following error message:</p> <pre>[LDTM_0072] [Amazon] (500310) Invalid operation: syntax error at or near ""."";</pre>

PowerExchange for Amazon Redshift Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-9834	<p>When you run an Amazon Redshift mapping on the Spark engine to read from or write to an Amazon Redshift cluster that has Version 4 authentication, the mapping fails with the following error message:</p> <p>Bad Request (Service: Amazon S3; Status Code: 400; Error Code: 400 Bad Request; Request ID: 9BDDEEB8241688A2)</p> <p>This issue occurs when you use the Hortonworks 2.6 distribution.</p>
OCON-9827	<p>When you run an Amazon Redshift mapping on the Spark engine to read from or write to an Amazon Redshift cluster that has Version 4 authentication, the mapping fails with the following error message:</p> <p>com.amazonaws.services.s3.model.AmazonS3Exception: Status Code: 400, AWS Service: Amazon S3, AWS Request ID: 5EEB36DFAC18DE3B, AWS Error Code: null, AWS Error Message: Bad Request</p> <p>This issue occurs when you use the IBM BigInsights 4.2 distribution.</p>
OCON-9663	<p>When you run an Amazon Redshift mapping to read or write data, the Stop on Errors property does not work.</p>
OCON-8022	<p>If you import an Amazon Redshift table that has a single quote (') in the column name, the mapping fails with the following error message:</p> <pre>[LDTM_0072] [Amazon] (500051) ERROR processing query/statement. Error: Parsing failed, Query: unload ('SELECT "adpqa"."sq_col"."id" FROM "adpqa"."sq_col") TO 's3://infa.qa.bucket/0b0ad503-1c2c-4514-95ac-85a5adb71b3b1489385038407/sq_col' credentials 'aws_access_key_id=*****;aws_secret_access_key=*****' ESCAPE DELIMITER ','</pre>
OCON-7965	<p>An Amazon Redshift mapping fails on the Blaze engine when it reads from or writes to an Amazon Redshift cluster that uses the Hortonworks 2.3 distribution and requires Version 4 authentication.</p>
OCON-7909	<p>When you run an Amazon Redshift mapping on the Blaze engine to read data from or write data to an Amazon Redshift cluster that requires Version 4 authentication, the mapping fails. This issue occurs if you use the MapR 5.2 distribution.</p>
OCON-7322	<p>If you import an Amazon Redshift table that has a single quote (') or a backslash (\) in the table name, the read and write operations fail.</p>
OCON-6929	<p>If you do not connect all the ports in an Amazon Redshift mapping and run the mapping on the Hive engine, the mapping fails with the following error:</p> <pre>java.lang.RuntimeException [HIVE_1070]The Integration Service failed to run Hive query [exec3_query_2] for task [exec3] due to following error: Hive error code [10,044] , Hive message [FAILED: SemanticException [Error 10044]</pre>
OCON-6921	<p>When you run an Amazon Redshift mapping that contains a timestamp field in the native environment, the Data Integration Service truncates the ultraseconds values to milliseconds.</p>

Bug	Description
OCON-6883	When you run an Amazon Redshift mapping on the Blaze engine to read from or write to an Amazon Redshift cluster that has Version 4 authentication, the mapping fails. This issue occurs when you use the IBM BigInsights 4.2 distribution.
OCON-6785	When the Amazon Redshift source contains both double quotes (") and the delimiter you specified in the mapping, double quotes are truncated in the target. Also, the escape character is retained in the target.
OCON-6583	If you set the Parallel option off in the unload command and run an Amazon Redshift mapping on the Blaze engine, all the rows from the source are not written to the Amazon Redshift target even though the mapping runs successfully.
OCON-6505	If you specify user impersonation in a Hadoop connection and run an Amazon Redshift mapping on the Hive engine, no data is written to the target even though the mapping runs successfully.
OCON-6346	When you run an Amazon Redshift mapping on the Blaze engine, the success and error files are not generated.
OCON-6266	When you run an Amazon Redshift mapping that compresses the staging files on the Blaze engine, the mapping fails. The staging files compression is ignored.
OCON-6260	When you run an Amazon Redshift mapping on the Blaze engine, the tasklet log does not display the row statistics even if the mapping runs successfully.
OCON-6252	When you run a mapping on the Blaze engine, the Real and Double data type values are rounded off. Workaround: Use the Numeric data type in place of Real and Double data types.
OCON-361	An Amazon Redshift mapping fails on the Hive engine for a Hadoop cluster that uses Kerberos authentication.
OCON-1297	When you configure the following attributes and run an Amazon Redshift mapping in the Hadoop environment, the mapping might fail based on the engine selected for mapping execution: Read Operation Attributes: <ul style="list-style-type: none"> - S3 Client Encryption - Staging Directory Location Write Operation Attributes: <ul style="list-style-type: none"> - Enable Compression - CopyOptions Property File - Null value for CHAR and VARCHAR data types - S3 Server Side Encryption - S3 Client Side Encryption - Staging Directory Location - Success File Directory - Error File Directory
OCON-1275	A mapping with more than one RedShift object fails in the Hadoop run-time environment for the MapR distribution.

Bug	Description
OCON-10209	When you run an Amazon Redshift mapping on the Spark engine to read from or write to an Amazon Redshift cluster that has Version 4 authentication, the mapping fails with the following error message: <code>com.amazonaws.services.s3.model.AmazonS3Exception:</code> This issue occurs when you use the MapR distribution.
OCON-10194	When you run a Redshift mapping on the Spark engine and the mapping fails, the Data Integration Service does not delete the Amazon S3 files from the Amazon S3 staging directory.

PowerExchange for Amazon S3

PowerExchange for Amazon S3 (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Amazon S3 (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Amazon S3 (10.2)

PowerExchange for Amazon S3 Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-7763	When you write data to an Amazon S3 target in the native environment, the null values in the String data type field are replaced by double quote characters (" "). However, the mapping runs successfully without any error.
OCON-6955	When you create an Amazon S3 connection, the metadata search does not display the empty directories.
OCON-235	When you configure an Amazon S3 connection, the Mumbai (ap-south-1) region name is missing from the Region Name list.

Bug	Description
BDM-9751	An Amazon S3 mapping fails when you run the mapping on the Blaze engine to write data to a target file with Unicode characters in the file name.
BDM-10204	<p>When you create a logical data object with an Amazon S3 data object in read a mapping and perform a lookup, the data preview fails with the following error message:</p> <pre>[LDTMCMN_0029] The LDTM could not complete the request because of the following error: com.informatica.sdk.dtm.ExecutionException:[LDTM_0072] Internal error.</pre>

PowerExchange for Amazon S3 Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
BDM-11443	When you run a mapping on the Spark engine to read data from a compressed Amazon S3 file and the file does not have extensions for the different compression formats, the mapping fails.
BDM-9750	<p>When you run a mapping on the Blaze engine to write data to a target that contains a semi-colon in the file name, the mapping fails.</p> <p>Workaround: Do not use semi-colons in the file name.</p>
OCON-25561	When you run a mapping that reads data from or writes data to a flat file and select the text qualifier as <code>NONE</code> , the <code>NONE</code> text qualifier is not honored. Instead, the default double quotes text qualifier is written to target.
OCON-12610	When you create an Amazon S3 data object, the value of the folder path is displayed incorrectly in the Resources tab.
OCON-12394	When you set the Compression Format type as none and run a mapping on the Spark engine to write an Avro file to an Amazon S3 target, the mapping runs successfully. However, the Data Integration Service compresses the target Amazon S3 file using the snappy compression format.
OCON-11798	When you select an encryption type and run a mapping in the native environment to read or write Avro and Parquet files, the mapping runs successfully. However, the encryption type is ignored.
OCON-10806	<p>When you run a mapping to read data from a Parquet source and the precision for the string values is greater than 4000, the mapping runs successfully.</p> <p>However, the Data Integration Service only writes string values with precision up to 4000 in the target and the remaining data gets truncated.</p>
OCON-10804	<p>When you run a mapping to write data to a Parquet target and you do not connect all the ports in the target, the mapping fails with the following error message:</p> <pre>java.lang.Exception: [MPSVCCMN_10094] The Mapping Service Module failed to run the job with ID [YZ-LZro4EeeVG1U8guulDA] because of the following error: [LDTM_0072] java.lang.RuntimeException:</pre>
OCON-10802	<p>When you run an Amazon S3 mapping to read data from a Parquet file that contain null values, the data preview fails with the following error message:</p> <pre>java.lang.RuntimeException: java.lang.RuntimeException:</pre>

Bug	Description
OCON-10664	<p>When you run an Amazon S3 mapping on the Spark engine to read from or write to an Amazon S3 cluster that has Version 4 authentication, the mapping fails with the following error message:</p> <pre>error Service: Amazon S3; Status Code: 400; Error Code: 400 Bad Request for regions which have V4 authentication</pre> <p>This issue occurs when you use the Hortonworks 2.5 distribution.</p>
OCON-10032	<p>When you run an Amazon S3 mapping on the Spark engine to read from or write to an Amazon S3 cluster that has Version 4 authentication, the mapping fails with the following error message:</p> <pre>com.amazonaws.services.s3.model.AmazonS3Exception: Status Code: 400, AWS Service: Amazon S3, AWS Request ID: B4AC764FDB8DA642, AWS Error Code: null, AWS Error Message: Bad Request</pre> <p>This issue occurs when you use the Hortonworks 2.6 distribution.</p>
OCON-10028	<p>When you run an Amazon S3 mapping on the Spark engine to read from or write to an Amazon S3 cluster that has Version 4 authentication, the mapping fails with the following error message:</p> <pre><CmdExecInProcessTasks-pool-2-thread-29> SEVERE:[Pre_Spark_Task_Command_1] [com.informatica.platform.dtm.executor.hadoop.impl.cmdtasks.HadoopFSRmRfTask]</pre> <p>This issue occurs when you use the IBM BigInsights 4.2 distribution.</p>
OCON-10026	<p>When you run an Amazon S3 mapping on the Spark engine to read from or write to an Amazon S3 cluster that has Version 4 authentication, the mapping fails with the following error message:</p> <pre><CmdExecInProcessTasks-pool-2-thread-29> SEVERE:[Pre_Spark_Task_Command_1] [com.informatica.platform.dtm.executor.hadoop.impl.cmdtasks.HadoopFSRmRfTask]</pre> <p>This issue occurs when you use the MapR 5.2 secure cluster.</p>
OCON-9765	<p>When you read files within a sub-directory that contains different compression formats, the Data Integration Service does not write the data to the target properly.</p>
OCON-9353	<p>When you create an Amazon S3 data object for the US East (Ohio) region and run a mapping on the Spark engine, the task fails. However, the same mapping runs successfully in the native environment.</p>
OCON-8996	<p>When you expand the bucket name list in the Object Explorer view, you cannot view the list of files available in a bucket.</p> <p>Workaround: To view the list of files available in a bucket, you must select the bucket name instead of expanding the bucket name list in the Object Explorer view.</p>
OCON-7963	<p>When you run an Amazon S3 mapping on the Blaze engine to read data from or write data to an Amazon S3 bucket that requires Version 4 authentication, the mapping fails. This issue occurs if you use the Hortonworks 2.3 distribution.</p>
OCON-7938	<p>When you run an Amazon S3 mapping in the native environment, the incorrect values in the decimal or bigint data type field are replaced by zeroes. However, the mapping runs successfully and the session log displays the following error message:</p> <pre>2017-03-13 23:46:08.131 <TASK_140116755179264-READER_1_1_1> SEVERE: [APPSDK_Msg_1762] Data for column [age] of type [bigint] should be a of type [java.lang.Number] or its sub-types.</pre>
OCON-7911	<p>When you run an Amazon S3 mapping on the Blaze engine to read data from or write data to an Amazon S3 bucket that requires Version 4 authentication, the mapping fails. This issue occurs if you use the MapR 5.2 distribution.</p>

Bug	Description
OCON-7743	<p>When you connect to Amazon S3 from Informatica Administrator for a Kerberos domain, database TLS enabled, or enabled secure communication, the test connection fails with the following error message:</p> <p>The requested operation could not be performed due to the following error: Connection error: Unable to execute HTTP reuest:</p>
OCON-7024	An Amazon S3 mapping fails on the Blaze engine when it reads from or writes to an Amazon S3 cluster that uses the IBM BigInsights 4.2 distribution and requires Version 4 authentication.
OCON-6887	If the delimiter in the source and the target is a multibyte character, the Amazon S3 mapping fails.
OCON-5736	When you run an Amazon S3 mapping that writes to an Amazon S3 target on the Blaze engine, the hash symbol (#) precedes the header in the Amazon S3 target.
OCON-293	An Amazon S3 mapping does not read valid rows if there are rows that contain errors in the Amazon S3 source object.

PowerExchange for Cassandra

PowerExchange for Cassandra (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Cassandra (10.2 HotFix 1)

PowerExchange for Cassandra Fixed Limitations (10.2 HotFix 1)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Cassandra Known Limitations (10.2 HotFix 1)

There are no known limitations in this release.

PowerExchange for Cassandra Third-Party Fixed Limitations (10.2 HotFix 1)

The following table describes third-party fixed limitations:

Bug	Description
OCON-6203	When you use Cassandra ODBC driver 2.4.1 to write to a Cassandra target, you may experience performance degradation.

PowerExchange for Cassandra (10.2)

PowerExchange for Cassandra Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Cassandra Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
PLAT-14671	When you select the Show Default Schema option in the Connection Explorer view, the Informatica Cassandra ODBC driver fails to fetch the tables from the default keyspace. Workaround: Disable the Show Default Schema option in the connection explorer and browse the keyspace to import the metadata. (421174)

PowerExchange for Cassandra Third-Party Limitations (10.2)

The following table describes third-party known limitations:

Bug	Description
PLAT-14799	The Cassandra database does not allow periods in column names. PreSQL or PostSQL queries generated with the SQL Editor fail with a syntax error because the SQL Editor prefixes periods to column names to qualify column names with table names. Workaround: Do not qualify column names with table names in queries. (397187)
PLAT-14798	The Cassandra database stores values of the Float data type in the exponential format. The value of the Float data type read by the Informatica Cassandra ODBC driver is not the same as the value of the Float data type in the Cassandra database because the Informatica Cassandra ODBC driver maps the Float data type to SQL_Real. (397018)
OCON-7787	The performance of reading data from a Cassandra source is slow even when you increase the number of partitions.
OCON-7027	The Cassandra ODBC driver does not support null values in collections and reports non-key columns in virtual tables as not nullable.

Bug	Description
OCON-7023	If you use a single SQL statement to write multiple rows to a Cassandra target and you bind the default value to the first row, the insert statement fails. Workaround: Use null instead of the default value.
OCON-6203	The performance of writing data to a Cassandra target is slow when you use Cassandra ODBC driver 2.4.1 when compared to 2.0.18.

PowerExchange for DataSift

PowerExchange for DataSift (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for DataSift (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for DataSift (10.2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Facebook

PowerExchange for Facebook (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Facebook (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Facebook (10.2)

PowerExchange for Facebook Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Facebook Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-9933	<p>The Scope attribute in PowerExchange for Facebook connection properties shows incorrect values.</p> <p>Workaround: Remove the following values from the Scope attribute before you test the connection or get access tokens:</p> <ul style="list-style-type: none">- user_activities- user_groups- user_interests- manage_notifications- read_friendlists- read_mailbox- read_stream <p>For more details about Facebook login permissions, see the Facebook documentation.</p>

PowerExchange for Greenplum

PowerExchange for Greenplum (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Greenplum (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Greenplum (10.2)

PowerExchange for Greenplum Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Greenplum Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
PLAT-13542	When you create a Greenplum connection by using the <code>infacmd isp CreateConnection</code> command, you must enter even the optional fields.

PowerExchange for Google BigQuery

PowerExchange for Google BigQuery (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for HBase

PowerExchange for HBase (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for HBase (10.2 HotFix 1)

PowerExchange for HBase Fixed Limitations (10.2 HotFix 1)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-14477	If you run an HDFS job on the Spark engine and then run an HBase mapping on the Spark engine, the mapping fails with a <code>GSS initiate</code> error.

PowerExchange for HBase Known Limitations (10.2 HotFix 1)

There are no known limitations in this release.

PowerExchange for HBase (10.2)

PowerExchange for HBase Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCN-6903	When you set the partitioning to None for the source or target HBase object and run a mapping on the Blaze engine, the mapping fails with the following error: 2016-11-15 16:42:40.804 <DTM-pool-2-thread-3> SEVERE: [GRIDDTM_1016] The Integration Service failed to execute grid mapping with following error [HBaseDataAdapter : java.lang.NullPointerException].

PowerExchange for HBase Known Limitations (10.2)

There are no known limitations in this release.

PowerExchange for HDFS

PowerExchange for HDFS (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for HDFS (10.2 HotFix 1)

PowerExchange for HDFS Fixed Limitations (10.2 HotFix1)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCN-14435	When you write data to a complex file target that uses the Parquet format, the Data Integration Service drops rows that have NULL values in some columns. This issue occurs if you run the mapping in the native environment or with the Blaze engine or Hive engine in the Hadoop environment.
OCN-14443	Mappings that write data to a complex file target that uses the Avro format fail in the native environment and on Kerberos-enabled clusters. This issue occurs because the Kerberos authentication triggers excessive <code>kinit</code> commands that result in denial of service errors on the Key Distribution Center.

PowerExchange for HDFS Known Limitations (10.2 HotFix 1)

There are no known limitations.

PowerExchange for HDFS (10.2)

PowerExchange for HDFS Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-8095	When you run a complex file mapping to read or write an Avro or Parquet file, the mapping fails on the Spark engine. This issue occurs when you use HDInsight with WASB file systems.
OCON-891	On the Blaze engine, a partitioned mapping that uses a local complex file object reads from and writes only to a single partition.

PowerExchange for HDFS Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
BDM-14811	Mapping validation shows an incorrect name of the parameter if you select a type that is not valid for the connection parameter. This error occurs when you import a flat file from the Hadoop environment, parameterize the connection name, and change the parameter type to a type that is not valid.

PowerExchange for Hive

PowerExchange for Hive (10.2 HotFix 2)

PowerExchange for Hive Fixed Limitations (10.2 HotFix 2)

Review the Release Notes of previous releases for information about previous fixed limitations.

There are no fixed limitations in this release.

PowerExchange for Hive Known Limitations (10.2 HotFix 2)

The following table describes known limitations:

Bug	Description
OCON-18717	<p>After you upgrade from 10.1.0 to 10.2 HotFix 2, if you run an existing Hive mapping on the Spark engine to read data from a Hive source and write data to a Hive target, the mapping fails with the following error:</p> <pre>java.lang.reflect.InvocationTargetException</pre> <p>Workaround: You must set the default SQL Identifier from double quotes (") to back quotes (`) before you run the mappings.</p> <p>The following example shows how to use a Command line program to set the SQL Identifier Character:</p> <pre>- ./infacmd.sh updateConnection -dn DomainName -un User -pd Password -cn ConnectionName -o quoteChar="quote_empty" - ./infacmd.sh updateConnection -dn DomainName -un User -pd Password -cn ConnectionName -o quoteChar="back_quote"</pre>

PowerExchange for Hive (10.2 HotFix 1)

PowerExchange for Hive Fixed Limitations (10.2 HotFix 1)

Review the Release Notes of previous releases for information about previous fixed limitations.

There are no fixed limitations in this release.

PowerExchange for Hive Known Limitations (10.2 HotFix 1)

The following table describes known limitations:

Bug	Description
OCON-14717	If you configure the Temporary Table Compression Codec field in a Hive connection to a value other than None and then upgrade to version 10.2 HotFix 1, the value gets reset to blank.

PowerExchange for Hive (10.2)

PowerExchange for Hive Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-8015	The Data Integration Service converts Hive 1.1.0 float data to double with incorrect values. Note: The Data Integration Service correctly converts the float data type in Hive 1.2.1.
OCON-7598	When you use a native IBM DB2 connection and run a mapping on the Hive engine to write data to an IBM DB2 partitioned table that does not exist in the default schema of the user, the mapping fails.
OCON-6344	When a mapping uses Hive source parameterization with get data object columns from source at run-time and the owner name field is empty in the PDO, the data preview fails with the following error: [LDTMEXP_0029] Failed to process mapping because of following reason[Import of table`ADPQA.sample_hive_source` failed as table not found].
OCON-956	When you import the Decimal data type from Hive tables, the Developer tool imports the Decimal data type metadata with an incorrect precision value.

PowerExchange for Hive Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
BDM-16907	When you specify a custom JDBC driver class name, the Hive mapping fails with an <code>UndeclaredThrowableException</code> error on the Blaze and Spark engines.

PowerExchange for JD Edwards EnterpriseOne

PowerExchange for JD Edwards EnterpriseOne (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for JD Edwards EnterpriseOne (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for JD Edwards EnterpriseOne (10.2)

PowerExchange for JD Edwards EnterpriseOne Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for JD Edwards EnterpriseOne Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-11523	When you import a table that contains the ID_LONG data type, the Integration Service fails to import some of the table columns.
OCON-11456	Even when the error threshold is reached, the Integration Service continues to process the data and mapping does not fail. The issue occurs because the Stop On Errors run-time property does not work.
OCON-11372	If the Integration Service writes rejected rows followed by valid rows to an interface table, the row statistics generated for an InterfaceWrite operation is incorrect.
OCON-11223	When you apply a native filter expression for data that contains the JDE date data type format that is not valid, the data preview and mapping does not fail. An appropriate error message does not appear when you use formats that are not valid. Workaround: Do not use the yyyy-mm-dd hh:mm:ss and hh:mm:ss date formats. Instead, use the yyyy-mm-dd format.

PowerExchange for LDAP

PowerExchange for LDAP (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for LDAP (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for LDAP (10.2)

PowerExchange for LDAP Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for LDAP Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-11513	When you run a mapping, the Integration Service communicates with the LDAP server directly instead of making or receiving calls through the proxy server.
OCON-11338	When you enable CDC, you cannot fetch entries related to deleted records. The error occurs when the recycle bin on the Active Directory server is full and cannot store more deleted records. Workaround: Empty the recycle bin on the Active Directory server and try again.
OCON-6882	On Solaris, a mapping fails when you perform a lookup against an LDAP source.
OCON-1151	Even when the error threshold is reached, the Integration Service continues to process the data and the mapping does not fail. The issue occurs because the Stop On Errors run-time property does not work.

PowerExchange for LinkedIn

PowerExchange for LinkedIn (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for LinkedIn (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for LinkedIn (10.2)

PowerExchange for LinkedIn Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for LinkedIn Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-9941	When you create a PowerExchange for LinkedIn connection, getting the OAuth token and secret for LinkedIn might fail. Workaround: When you create a connection, verify that the Scope attribute contains the values defined in the LinkedIn application. The default values specified in the Scope attribute might not work. For more details, see the LinkedIn documentation.

PowerExchange for MapR-DB

PowerExchange for MapR-DB (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for MapR-DB (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for MapR-DB (10.2)

PowerExchange for MapR-DB Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-7815	When you run a mapping on the Hive engine to read data from or write data to MapR-DB, the Data Integration Service does not validate the mapping.

PowerExchange for MapR-DB Known Limitations (10.2)

There are no known limitations.

PowerExchange for Microsoft Azure Blob Storage

PowerExchange for Microsoft Azure Blob Storage (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure Blob Storage (10.2 HotFix 1)

PowerExchange for Microsoft Azure Blob Storage Fixed Limitations (10.2 HotFix 1)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure Blob Storage Known Limitations (10.2 HotFix 1)

The following table describes known limitations:

Bug	Description
OCON-12327	When you select single or double quotes as text qualifier, the write operation fails for a flat file in the native environment.

PowerExchange for Microsoft Azure Blob Storage (10.2)

PowerExchange for Microsoft Azure Blob Storage Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-1239	The Data Integration Service fails to read a file if the file size is more than 1 GB.
OCON-1194	When you write to Microsoft Azure Blob Storage, you cannot use the Text qualifier and Preview Options in the Column Projection tab.

PowerExchange for Microsoft Azure Blob Storage Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-10125	When you read data from or write data to Microsoft Azure Blob Storage, the entire blob gets downloaded in the staging directory even if you cancel the mapping.
OCON-10124	When you read data from or write data Microsoft Azure Blob Storage, the entire blob gets downloaded in the staging directory even after you cancel the data preview.
OCON-8793	You cannot run a Microsoft Azure Blob Storage mapping on the Blaze engine.

PowerExchange for Microsoft Azure Data Lake Store

PowerExchange for Microsoft Azure Data Lake Store (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure Data Lake Store (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure Data Lake Store (10.2)

PowerExchange for Microsoft Azure Data Lake Store Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-10244	When you read data from or write data to Microsoft Azure Data Lake Store, the entire file gets downloaded in the staging directory even if you cancel the mapping.
OCON-9798	When you run a Microsoft Azure Data Lake Store mapping on the Spark engine and read from or write data of the Binary data type to Microsoft Azure Data Lake Store, the mapping fails.
OCON-9491	The data preview takes longer time for large files.

PowerExchange for Microsoft Azure SQL Data Warehouse

PowerExchange for Microsoft Azure SQL Data Warehouse (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure SQL Data Warehouse (10.2 HotFix 1)

PowerExchange for Microsoft Azure SQL Data Warehouse Fixed Limitations (10.2 HotFix 1)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure SQL Data Warehouse Known Limitations (10.2 HotFix 1)

The following table describes known limitations:

Bug	Description
OCON-12973	When you run a mapping that contains unconnected ports on the Hive engine, the mapping might fail or data corruption might happen.
OCON-12844	When you upsert or update data to Microsoft Azure SQL Data Warehouse and more than one column in the source table contains the same value as the target column on which the primary key is defined, the Data Integration Service updates data incorrectly.

PowerExchange for Microsoft Azure SQL Data Warehouse (10.2)

PowerExchange for Microsoft Azure SQL Data Warehouse Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Azure SQL Data Warehouse Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-10181	When you read data from Microsoft Azure SQL Data Warehouse and the table contains special character, the mapping fails.
OCON-10141	When you run a mapping on the Hive engine to read data from or write data to Microsoft Azure SQL Data Warehouse, the intermediate files get downloaded in the staging directory even if you cancel the mapping.

Bug	Description
OCON-10128	When you create a data object to read data from a large table in Microsoft Azure SQL Data Warehouse, preview the data, and set the Read up to how many rows field to 1000, the Data Integration Services downloads the entire table in the staging directory.
OCON-8793	You cannot run a Microsoft Azure SQL Data Warehouse mapping on the Blaze engine.
OCON-972	The Hadoop job log does not display reader logs.
OCON-844	The Data Integration Service reads a blank char, varchar, nchar, or nvarchar data type record from Microsoft Azure SQL Data Warehouse as Null.
OCON-811	When a mapping fails or when you cancel an operation, the Data Integration Service does not delete the external table and staging blob files. You must manually delete the files.
OCON-585	When an Azure table contains a bad record, the Data Integration Service fails the mapping instead of rejecting the bad record.
OCON-533	You cannot run a mapping in the Hadoop environment to delete data.
OCON-399	When you run a mapping on the Hive engine, the Data Integration Service submits the job as Yarn user instead of Data Integration Service user.

PowerExchange for Microsoft Dynamics CRM

PowerExchange for Microsoft Dynamics CRM (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Dynamics CRM (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Microsoft Dynamics CRM (10.2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for MongoDB

PowerExchange for MongoDB (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for MongoDB (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for MongoDB (10.2)

PowerExchange for MongoDB Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for MongoDB Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-11546	You cannot run Mongo shell commands from the Developer tool. (405297)
OCON-11383	The mapping performance while inserting data to MongoDB with the 3.0 WiredTiger storage engine is slower when compared to the MMapV1 storage engine. (433440)
OCON-11289	Transformation errors appear in the session log even if the mapping does not contain any transformation. Workaround: You can ignore the transformation errors. (406337)
OCON-11234	You cannot use the MongoDB ODBC driver to import a MongoDB collection that does not contain data. (405299)
OCON-11159	Column names of a MongoDB data object cannot exceed 255 characters. (344934)
OCON-11151	When you refresh a MongoDB data source in the Import Tables dialog box, the dropped MongoDB collections still appear. (404363)
OCON-11135	The virtual tables appear in the Import Tables dialog box only when you import the table metadata. (404362)
OCON-9726	When you create a mapping and specify special characters or white spaces in the source or target name, the mapping fails.

PowerExchange for MongoDB Third-Party Limitations (10.2)

The following table describes third-party known limitations:

Bug	Description
PLAT-14869	When you use PowerExchange for MongoDB to insert, update, or delete records in the MongoDB database, the performance for each of these operations is slow for a MongoDB cluster when compared to a single node. (437855)
OCON-11418	When you enable reading or writing as JSON documents, the JSON import might fail because the JSON import and export formats in the Informatica MongoDB driver are not symmetrical. Workaround: To load JSON documents, use the mongoimport tool. (408233)
OCON-11231	Even when you enable Show array count in virtual main table , the Informatica MongoDB driver does not create the array count column. (405302)
OCON-11175	When you run a mapping with a Joiner transformation to read from a MongoDB database version earlier than 2.6.3, the following error might appear in the mapping log even if the nested element is not null: <code>LEFT_SUBFIELD only supports Object</code> (407700)

PowerExchange for Netezza

PowerExchange for Netezza (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Netezza (10.2 HotFix 1)

PowerExchange for Netezza Fixed Limitations (10.2 HotFix 1)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-13511	When you write decimal values to a Netezza target, the Data Integration Service writes positive and negative values in the decimal data incorrectly.

PowerExchange for Netezza Known Limitations (10.2 HotFix 1)

There are no known limitations in this release.

PowerExchange for Netezza (10.2)

PowerExchange for Netezza Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-8036	When you run a Netezza mapping on the Blaze engine to read data from Netezza and the cluster is enabled for Kerberos, the mapping fails.
OCON-7652	If the Netezza data warehouse appliance returns metadata in lower case, column discovery fails for Netezza data objects.

PowerExchange for Netezza Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-1111	When you create a Netezza connection by using the infacmd isp CreateConnection command, you must enter even the optional fields.
OCON-658	When you read data from two or more Netezza sources, you cannot override the source schema and source table name at run time.

PowerExchange for OData

PowerExchange for OData (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for OData (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for OData (10.2)

PowerExchange for OData Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for OData Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-11505	OData service requests do not use the proxy server that is configured for the Data Integration Service. (417463)
OCON-1196	When the data size is greater than 700 MB, the OData mappings fail. (424279)

PowerExchange for OData Third-Party Limitations (10.2)

The following table describes third-party known limitations:

Bug	Description
OCON-11357	When you import an SAP HANA table in an OData data object, the Developer tool imports the Smalldecimal data type as Decimal (16,0). It also truncates the decimal part of the data at run time. (402732) OData ticket reference number: 514713/2015
OCON-11290	Data preview fails for an OData data object when all of the following conditions are true: <ul style="list-style-type: none">- The data object contains a column of the Datetime data type and has a value of 0000-00-00T00:00:00.- The data serialization format is set to ATOM/XML. (405141) Olingo ticket reference number: OLINGO-602

PowerExchange for Salesforce

PowerExchange for Salesforce (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Salesforce (10.2 HotFix1)

PowerExchange for Salesforce Fixed Limitations (10.2 HotFix 1)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-14953	The Data Integration Service does not use the run-time HTTP proxy options.
OCON-14444	When the Data Integration Service attempts to re-establish the connection to Salesforce, the mapping stops responding.

PowerExchange for Salesforce Known Limitations (10.2 HotFix 1)

There are no known limitations in this release.

PowerExchange for Salesforce (10.2)

PowerExchange for Salesforce Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-747	In bulk mode, when you write data to a Salesforce custom object of type check box, the mapping fails.
OCON-396	PowerExchange for Salesforce does not log exceptions for SSL connection errors in the session log.

PowerExchange for Salesforce Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-8948	When you create a mapping to write data from a Salesforce object to a database object and set CDC Time Limit to -1 to capture changed data for an infinite period of time, the mapping fails to load data into the target. This error occurs when the data read from the source is less than the batch size.
OCON-826	The Data Integration Service does not create success files and error files for Salesforce mappings.

PowerExchange for SAP NetWeaver

PowerExchange for SAP NetWeaver (10.2 HotFix 2)

PowerExchange for SAP NetWeaver Fixed Limitations (10.2 HotFix 2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-17971	When you load data to SAP BW, the status of the InfoPackage is not set to red even though the mapping fails.

PowerExchange for SAP NetWeaver Known Limitations (10.2 HotFix 2)

There are no known limitations in this release.

PowerExchange for SAP NetWeaver (10.2 HotFix1)

PowerExchange for SAP NetWeaver Fixed Limitations (10.2 HotFix1)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-14068	If you run a mapping in staging mode to read umlauts characters from SAP tables, the mapping fails.
OCON-13331	If you enable SFTP in an SAP connection to read data from SAP tables in staging mode, the mapping randomly fails with a <code>pipe closed error</code> .

PowerExchange for SAP NetWeaver Known Limitations (10.2 HotFix1)

There are no known limitations.

PowerExchange for SAP NetWeaver (10.2)

PowerExchange for SAP NetWeaver Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-9939	When you concurrently preview data or run a mapping with multiple SAP table read operations in streaming mode, the data is jumbled.
OCON-9677	If you enable SFTP while creating an SAP connection, the Public key file name , Private key file name , and Private key file name password fields are required.
OCON-9130	If you configure staging mode and use an NFS mount to access the stage file, the mapping fails.

PowerExchange for SAP NetWeaver Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-11528	In an SAP Table data object read operation, when you define a sort condition for cluster and pool tables and run a mapping, the mapping fails. (428266)
OCON-11497	When you add an SAP Table data object read operation as a Lookup transformation in a mapping, and configure the lookup condition based on a transparent table and a cluster or pool table, the mapping fails. (432043)
OCON-11454	When you enter FTP and SFTP details in an SAP connection and then clear the Use FTP and Use SFTP options, the details that you entered are cleared from the dialog box. This issue occurs when you create an SAP connection in Informatica Administrator and Informatica Developer. (407606)
OCON-11286	<p>On Windows 64-bit operating systems, when you run a mapping with the deprecated SAP data object read operation, the mapping fails.</p> <p>Workaround: Download the following library files from the SAP Service Marketplace:</p> <ul style="list-style-type: none">- icudt34.dll- icuin34.dll- icuuc34.dll <p>Copy the files to the following directory and run the mapping again:</p> <p><Informatica installation directory>/services/shared/bin</p> <p>To test SAP connections from Informatica Administrator, you must also copy the files to the following directory:</p> <p><Informatica installation directory>/server/bin</p> <p>(441761)</p>
OCON-11222	In Informatica Administrator, after you create a successful SNC-enabled SAP connection, if you edit the connection and specify incorrect values for the SNC library path, the Administrator tool validates the connection as successful. It does not display any error. (407551)
OCON-11201	<p>In Informatica Administrator, while deploying an application to a Data Integration Service, the physical data object type is incorrectly displayed for the following SAP data objects:</p> <ul style="list-style-type: none">- SAP Table data object- SAP BW OHS Extract data object- SAP BW Load data object <p>(428770)</p>
OCON-9961	If you create an SAP BW OHS mapping or workflow within a folder and do not specify the folder name when you set the OHD parameters, the Data Integration Service does not read any data. It also prints an incorrect OHS request ID in the mapping log.
OCON-9717	The Developer tool does not validate the values that you enter in the FTP fields of an SAP connection.
OCON-520	When you parameterize an SAP Table data object read operation property, you cannot define a precision that is higher than 28 for decimal data types. (435156)

PowerExchange for SAP NetWeaver Third-Party Limitations (10.2)

The following table describes third-party known limitations:

Bug	Description
OCON-10144	If you configure tracing in the <code>sapnwrfc.ini</code> file and use patch 42 of the SAP NetWeaver RFC SDK libraries, PowerExchange for SAP NetWeaver does not generate the trace file. SAP ticket reference number: 370381/2017 Workaround: Use patch 20 or patch 38 of the SAP NetWeaver RFC SDK libraries.

PowerExchange for Tableau

PowerExchange for Tableau (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Tableau (10.2 HotFix 1)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Tableau (10.2)

PowerExchange for Tableau Fixed Limitations (10.2)

There are no fixed limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Tableau Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-9701	When you use the command line options to create a Tableau connection, the connection fails.
OCON-6521	When you connect to Tableau from Informatica Administrator for an Informatica domain enabled with SSL, the test connection fails .

PowerExchange for Tableau V3

PowerExchange for Tableau V3 (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Teradata Parallel Transporter API

PowerExchange for Teradata Parallel Transports API (10.2 HotFix 2)

There are no fixed or known limitations in this release.

Review the Release Notes of previous releases for information about previous fixed limitations.

PowerExchange for Teradata Parallel Transporter API (10.2 HotFix 1)

PowerExchange for Teradata Parallel Transporter API Fixed Limitations (10.2 HotFix 1)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-13301	When you use a single Teradata connection to run multiple mappings concurrently, one of the mappings fails.

PowerExchange for Teradata Parallel Transporter API Known Limitations (10.2 HotFix 1)

There are no known limitations in this release.

PowerExchange for Teradata Parallel Transporter API (10.2)

PowerExchange for Teradata Parallel Transporter API Fixed Limitations (10.2)

Review the Release Notes of previous releases for information about previous fixed limitations.

The following table describes fixed limitations:

Bug	Description
OCON-8775	If you use the Developer tool, PowerExchange for Teradata Parallel Transporter API takes a long time to read data when compared to PowerCenter.
OCON-7739	When you preview data of a Teradata data object that contains a column of the CLOB data type, the data viewer truncates the data for all columns after the CLOB data type column.
OCON-5769	When you use the native Teradata Connector for Hadoop to run a mapping that contains a Filter transformation, the Developer tool pushes the Filter transformation logic to the source even though you do not set the optimization level.

PowerExchange for Teradata Parallel Transporter API Third-Party Fixed Limitations (10.2)

The following table describes third-party fixed limitations:

Bug	Description
OCON-985	When you use the Stream operator and configure partitioning, Teradata mappings stop responding. Teradata incident reference number: RECGJPQJN

PowerExchange for Teradata Parallel Transporter API Known Limitations (10.2)

The following table describes known limitations:

Bug	Description
OCON-658	When you read data from two or more Teradata sources, you cannot override the source schema and source table name at run time.
OCON-554	When you create a Teradata Parallel Transporter API connection by using the infacmd isp CreateConnection command, you must enter even the optional fields.
