Read the Informatica® PowerExchange® for SAS Release Notes to learn about new features, known limitations, and bug fixes associated with version 10.4.0.

## 10.4.0 New Features

Effective in version 10.4.0, PowerExchange for SAS includes the following features:

### [Read data from a SAS file list](#)

You can configure a read operation to read data from SAS files specified within a SAS file list.

In the SAS data object read operation advanced properties, you can use the indirect source file type and specify the SAS file list name along with the path from which you want to read the data.

### [Partitioning](#)

You can configure fixed partitioning for a SAS data object operation. To configure fixed partitioning, you must first set the maximum parallelism for the Data Integration Service depending on the number of partitions that you want to configure. Specify the partition type and the number of partitions that the Data Integration Service must create in the runtime properties of the SAS data object.

### [SAS files on Linux](#)

You can use PowerExchange for SAS to read data from SAS files created on the Linux operating system.

## 10.4.0 Limitations

There are no fixed or known limitations in this release.

## Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:

<https://www.informatica.com/services-and-training/customer-success-services/contact-us.html>.

To find online support resources on the Informatica Network, visit <https://network.informatica.com> and select the eSupport option.
