Fixed Limitations.....	1
Known Limitations.....	3
Informatica Global Customer Support.....	5

Read the *Data Quality Release Notes* to learn about known limitations and third-party limitations for Data Quality.

For information about new features and enhancements, see *What's New*.

Fixed Limitations

The following table describes fixed issues in Informatica Intelligent Cloud ServicesSM Data Quality. Not all monthly releases include fixed issues. The (<release>) value in each issue description represents the release in which the issue was fixed.

CR	Description
DQC-22247	If you include single quotation marks in the Exception description field in a rule specification action, the field discards the single quotation marks when you close and reopen the action configuration dialog box. (December 2022 release)
DQC-22229	A mapping with a Rule Specification transformation fails when the rule specification asset in the transformation contains a maplet that reads Java transformation. (December 2022 release)
DQC-22222	If you include single quotation marks in the Exception description field in a rule specification action and you test the asset, the test fails. (December 2022 release)
DQC-21831	If you run a mapping with a Verifier transformation in certified mode on United States data outside the United States, the mapping fails and generates an error message. (December 2022 release)
DQC-21632	A rule specification asset does not display a validation error in the following scenario: <ul style="list-style-type: none">- You add a rule specification to a condition in the current rule specification.- The input on the condition and the output from the rule specification that you add to the condition use different data types. (December 2022 release)
DQC-19690	The My Jobs page in Data Quality does not display any data in the Status column for profiling tasks. (December 2022 release)

CR	Description
DQC-21974	If you configure a rule statement function to read a rule specification, you cannot select an output field for the rule specification that you add to the function. The issue arises when you imported the rule specification that you add to the rule statement. (November 2022 release)
DQC-21813	If you enter a date value in the test panel in a deduplicate asset and you do not specify a time in the value, the asset sets the time to 12:00 PM. (November 2022 release)
DQC-21783	A mapping that contains a Verifier transformation fails at run time if the transformation contains a verifier asset that you configured to generate a certification report. (November 2022 release)
DQC-21751	A rule statement in a rule specification can display "function" and not "expression" as the condition type after you configure a custom expression in the rule statement. (November 2022 release)
DQC-21712	The Clear Test Data button in the test panel of a rule specification can become inactive if you minimize and maximize or restore the test panel. (November 2022 release)
DQC-21665	A rule specification asset that reads inputs with conflicting data types does not display a validation error when you test the asset or configure it in a mapping, which leads to a runtime error. (November 2022 release)
DQC-21644	You cannot copy or move a rule set to another rule specification. (November 2022 release)
DQC-21643	You cannot copy or move a rule set within a rule specification. (November 2022 release)
DQC-21639	A rule specification asset displays a validation error in the following scenario: <ul style="list-style-type: none"> - You add a rule specification to a rule statement in the current rule specification. - The rule specification that you add includes a rule statement that reads inputs with string and integer data types. (November 2022 release)
DQC-21631	The OK button in an action or condition configuration dialog box in a rule specification is not visible at some browser magnifications or display resolutions. (November 2022 release)
DQC-21597	A parse asset step does not display the name of the valid dictionary column when you open the asset in read-only mode. The issue arises when a user updated the column name from the default name. (November 2022 release)
DQC-21586	A test operation in a deduplicate asset fails for data that you import if the data includes a date-time value in the following format: [MM/DD/YYYY hh:mm]. (November 2022 release)
DQC-21557	A rule specification can add exception data values to records with a Valid status in addition to records with an Invalid status. The issue arises when you configure the default rule statement in a rule set to return an Invalid status. The issue is observed in the asset test panel and in the Rule Specification transformation output. (November 2022 release)
DQC-20916	You cannot perform tests in multiple assets in the Data Quality service concurrently. (November 2022 release)
DQC-18107	A mapping that runs in elastic mode with a Verifier transformation fails in the following scenario: <ul style="list-style-type: none"> - You select an output field name that contains a dash symbol on the Verifier transformation. (November 2022 release)
DQC-15100	A deduplicate asset erases the test data that you enter if you change the data type of a column of test data on the Consolidation tab from String to Date. (November 2022 release)

CR	Description
DQC-19649	If you generate a rule specification from a profile, the Asset References panel asset does not list the profile in the Used By section. (October 2022 release)
DQC-19362	<p>You cannot save changes to the Properties dialog box in a labeler asset in either of the following scenarios:</p> <ul style="list-style-type: none"> - You open the dialog box and select a delimiter for deletion, but you cancel the operation. You then reopen the dialog box and try to delete the delimiter again. - You add a custom delimiter, and you add a row for an additional delimiter. You delete the latter row before you specify the delimiter value. <p>(October 2022 release)</p>

Known Limitations

The following table describes general Informatica Intelligent Cloud Services Data Quality known limitations in this release. The (<release>) value in each issue description indicates the release in which the issue was reported.

CR	Description
CP-9692	<p>If you add a rule specification to a profiling task and you then click the Create Exception Task button in the profiling task, the exception task that you create does not include the rule specification.</p> <p>Workaround: save the profiling task after you add the rule specification. Then, create the exception task. (December 2022 release)</p>
DQC-22651	If you run a test in a rule specification, the test fails when the asset contains a mapplet that reads two Java transformations. The issue is observed when the mapplet includes the Java transformations in parallel. (December 2022 release)
DQC-22650	If you run a test in a rule specification, the test fails when the asset contains a mapplet that reads two Java transformations. The issue is observed when the mapplet includes the Java transformations in sequence. (December 2022 release)
DQC-22625	An exception task fails when an Exception description field in the associated rule specification contains text in an ordered list. (December 2022 release)
DQC-22616	<p>Data in the Test panel of a deduplicate asset becomes corrupted and the panel displays a validation error in the following scenario:</p> <ul style="list-style-type: none"> - You import data to the panel that includes date data in a non-valid format. - You update the dates to a valid format. <p>Workaround: Click Clear Data in the test panel. Then, update the date values in the input file to a valid format and import the data again. (December 2022 release)</p>
DQC-22614	An exception task that contains multiple rule specifications can take longer than expected to run. The issue is observed for a task that reads 13 rule specifications. (December 2022 release)
DQC-22605	When you use the List of Values option in a condition function and run a test, the rule specification asset applies the Case sensitive option to the test data and does not return the expected results. The issue is observed when you configure the condition without selecting the Case sensitive option for the test data. (December 2022 release)

CR	Description
DQC-22603	When you change the condition function in a rule statement from List of Values to Dictionary, the configuration dialog box becomes unresponsive. (December 2022 release)
DQC-22597	A mapping with a Rule Specification transformation fails when the rule specification asset in the transformation contains a mapplet that reads another mapplet. Likewise, if you test the rule specification asset in Data Quality, the test fails. (December 2022 release)
DQC-22594	An exception task fails when the source data for the associated profile includes any of the following column names: RowId, Exception Message, Priority, Rule Name, Rule Input Columns, JobId, or Creation Date. (December 2022 release)
DQC-22591	A mapping that contains a Verifier transformation or a Deduplicate transformation fails in the following scenario: <ul style="list-style-type: none"> - The mapping reads multibyte data. - You run the mapping in advanced mode in a serverless environment. (December 2022 release)
DQC-22566	An exception task does not return multibyte data correctly in the following scenario: <ul style="list-style-type: none"> - You use multibyte characters to define the logic in the embedded rule specification. - You enter multibyte characters to the exception description. (December 2022 release)
DQC-22565	An exception task that you run fails when the Exception description field in a rule specification action contains special characters. (December 2022 release)
DQC-22564	Data Quality and Data Integration meters do not count the exception tasks that you run. (December 2022 release)
DQC-22545	Data Quality fails to update the Location property of an exception task on the My Jobs page in the following scenario: <ul style="list-style-type: none"> - You create and run exception tasks with same name at different locations. - You copy one of the tasks to a new location and run the task. (December 2022 release)
DQC-22544	Data Quality increments the job instance ID number in an exception task unexpectedly when you copy the task from one location to another and run the task in the new location. (December 2022 release)
DQC-22543	Data Quality updates the job instance ID number in an exception task unexpectedly in the following scenario: <ul style="list-style-type: none"> - You create, run, and delete an exception task. - You create and run another exception task with the same name as the deleted task and in same location. (December 2022 release)
DQC-22542	Data Quality updates the job instance ID number in an exception task unexpectedly in the following scenario: <ul style="list-style-type: none"> - You create and run an exception task at a given location. - You create and run an exception task with the same name at a different location. The issue is observed when you create the exception tasks from the same profiling task. (December 2022 release)

CR	Description
DQC-22489	An exception task fails in the following scenario: <ul style="list-style-type: none"> - The maximum string length on the rule specification that the exception task reads is greater than 245. - You populate an Exception description field in the rule specification with a string whose length matches the maximum string length. (December 2022 release)
DQC-22348	The Save button in an exception task is enabled in the following cases: <ul style="list-style-type: none"> - You enter a non-valid email address in an email notification field. - You leave the email notification fields blank. The issue arises when you use the custom email notification options in the exception task. (December 2022 release)
DQC-21370	Data Quality displays an empty page when you open a data profiling job from the My Jobs page. (December 2022 release)
DQC-22255	When you open the job details page for a completed exception job from the Notifications icon in Data Quality or Data Profiling, the job properties open in the Monitor service and display the Profiling properties. (November 2022 release)
DQC-21672	You can edit a data quality asset when you open the asset and refresh the web browser in read-only mode. (October 2022 release)
DQC-21657	A rule specification asset can display a validation error in the following scenario: <ul style="list-style-type: none"> - You add a maplet that contains an Expression transformation to the rule specification. - The Expression transformation specifies a value of decimal data type as a constant. The issue is observed when you use the float data type for the decimal value in the rule specification. (October 2022 release)
DQC-19702	An elastic mapping that contains a Deduplicate transformation fails in the following scenario: <ul style="list-style-type: none"> - You configure the mapping with an ADLSGen2 source file and target file. - The source file has ten or more columns and includes a large volume data, for example 200 GB. Workaround: Set the spark.executor.cores value to 1. (May 2022 release)
DQC-19359	The Administrator service displays a ReferenceDataLocation property for address verification reference data on an elastic Secure Agent, although the elastic agent does not use the property. (May 2022 release)
DQC-18565	Data Integration does not generate a mapping validation error if the mapping contains an invalid data quality asset and the invalid asset also contains a tag. (October 2021 release)

For information about new features and enhancements, see *What's New*.
