CHAPTER 1

November 2022

The November 2022 release of Informatica Intelligent Cloud Services™ API Manager includes the following updates.

New features and enhancements

The November 2022 release of API Manager includes the following new features and enhancements.

OAuth 2.0 clients for the API Microgateway service

This release includes the following enhancements to OAuth 2.0 clients for the API Microgateway service:

Download a list of deleted OAuth 2.0 clients

You can download a list of deleted OAuth 2.0 clients in JSON format.

View additional OAuth 2.0 client details

You can view additional OAuth 2.0 client details in the response body, including created time, deleted time, last accessed time, last disabled time, last enabled time, last locked time, last secret generated time, last updated time, and state.

Set access token timeout

You can set the timeout for the access token while creating an OAuth 2.0 client. The timeout can be from 5 minutes through 1,440 minutes. The default timeout is 60 minutes.

Edit access token timeout

You can edit the timeout for the access token after you create an OAuth 2.0 client.

Disabling and enabling OAuth 2.0 clients

You can disable and enable an OAuth 2.0 client. API consumers can't use disabled OAuth 2.0 clients for authentication.

For more information, see the API Manager help.

Changed behavior

The November 2022 release of API Manager includes the following changed behavior.

OAuth 2.0 client token timeout

The default timeout of an OAuth 2.0 client token that you use with API Microgateway is 60 minutes.

Previously, the default timeout was 15 minutes.

CHAPTER 2

October 2022

The October 2022 release of Informatica Intelligent Cloud Services™ API Manager includes the following updates.

New features and enhancements

The October 2022 release of API Manager includes the following new features and enhancements.

Organizational rate limit tier

You can edit the default organizational rate limit tier that is assigned to all the APIs in your organization that are managed through API Manager.

Define the organizational rate limit policy by choosing how to assign the rate limit tier. The tier can either be shared by all users or allocated per user.

For more information about organizational rate limits, see the API Manager help.

Download ZIP log files

You can download activity and event logs as ZIP files for the month that you select from the last six months.

For more information about logs, see the API Manager help.

Changed behavior

The October 2022 release of API Manager includes the following changed behaviors.

OAuth 2.0 authentication for API Microgateway

You can configure OAuth 2.0 authentication for the API Microgateway Service to use with managed APIs by passing an access token without a session ID in the request header.

Previously, OAuth 2.0 authentication configuration required passing both an access token and a session ID in the request header.

You can continue to use existing managed APIs that require both an access token and a session ID. To simplify OAuth 2.0 authentication for the API Microgateway Service, pass an access token without a session ID.

CSV log file

You can download up to 500 activity and event logs to a CSV file, for the date range that you select.

Previously, you could download up to 5,000 activity and event logs to a CSV file.
