Preface

Read the *Release Notes* to learn about fixes and known limitations for Reference 360.

For information about new features and enhancements, see *What's New*.

MDM - Reference 360

Fixed issues

The following table describes the Reference 360 fixed issues. Not all monthly releases include fixed issues. The (<release>) value in each issue description represents the release in which the issue was fixed.

Reference Number	Description
RDMNEX-9426	After you add a row to the external URLs or notification recipients, if you switch to a different workspace, you can't view the added row. If you try to add a row, an error message appears. (January 2023)
RDMNEX-9076	You can edit the value of the Code attribute even after you define a basic rule association for it. (December 2022)
MDMN-86682	When a code list contains more than 10,000 code values, if you filter the code values and select a code value from the filtered list, the page doesn't load. (November 2022)

Reference Number	Description
MDMN-84647	The export API might not return display attribute values for a reference or dependent attribute when the data type is boolean or integer. The issue occurs if the value of the addLabelsForReferenceAttribute field is <code>true</code> . (November 2022)
MDMN-84245	The export API doesn't return the reference attributes that are nested beyond the second level. The issue occurs when you export code lists for a specific point in time. (November 2022)
RDMNEX-7961	When you try to add a value to a required field that is set as an output field of an advanced rule association, on the New Code Value page, a validation error message appears before the rule runs. (November 2022)
RDMNEX-7997	If rule set names in advanced rule associations contain a space, you get an error message when you save a code list that uses the rule. (September 2022)
RDMNEX-8342	Users with the Reference 360 Primary Owner role can't delete code values of a draft code list. (August 2022)
RDMNEX-6804	In draft code lists, edited code values are not updated, and the updated indicator does not appear. (August 2022)
RDMNEX-8060	Users with the Business Analyst roles can view the Add Approval Task button on the Workflow tab of a code list even though they don't have the required privilege to view it. (June 2022)
RDMNEX-8022	When a user with the Business Analyst role opens the Workflow Inbox page by using a bookmarked URL, the page does not appear correctly. (June 2022)
RDMNEX-8009	When you view the history feed of assets using filters and then clear the applied filters, the history feed continues to display the filtered results. (June 2022)
RDMNEX-7998	The Domain, Confidentiality, and Priority fields do not appear on the Summary tab of default code lists. (June 2022)
RDMNEX-7503	After you modify the definition of a code list, you can't add the same code values to the attributes of the code list. (June 2022)
RDMNEX-6894	When you configure a concatenate rule for any attribute of a code list, clicking Add Input resets the values of other fields. (June 2022)

Reference Number	Description
RDMNEX-2472 MDMN-15373	When you try to publish a code list that contains a large amount of values, the following error occurs: Failed to change draft state (June 2022)
RDMNEX-7874	On the Home page, the tile name and title of what's new video for the April release appear incorrectly as What's new in December 2021 instead of What's new in April 2022. (May 2022)
RDMNEX-7789	When you filter the history feed of a reference data set or a hierarchy by current date, the filter results don't display any event. (May 2022)
RDMNEX-7471	When you open the code list after you publish or discard the draft code list, the Import Values icon doesn't appear. (April 2022)
RDMNEX-7432	When you filter or sort the job instances that appear on multiple pages on the My Jobs page, you do not get the expected results. When you sort the job schedules by status, the sorted results appear incorrectly. (April 2022)
RDMNEX-7414	If you open the code list from the Explore page after you update the code list and save the changes, the code list doesn't display the updated values. (April 2022)

Known issues

The following table describes the Reference 360 known issues in this release. The (<release>) value in each issue description represents the release in which the issue was reported.

Reference Number	Description
RDMNEX-9488	After you rename any imported asset in an organization and then import any of the previously imported assets, the import fails because of overlapping IDs of assets. (December 2022)
RDMNEX-9374	When you import code values to a code list that contains an advanced rule association with a Boolean field as the output field, the import fails. (December 2022)
MDMN-91962	When you add an advanced rule association to concatenate two fields that contain more than 100 characters for the Code attribute, the rule output displays the first 100 characters of the fields. (November 2022)
RDMNEX-8902	You can't create a code list in a reference data set that contains invalid stakeholder details. (November 2022)

Reference Number	Description
RDMNEX-8409	When you edit code values of a code list and publish the code list, the code value details panel appears in edit mode. (June 2022)
RDMNEX-8090	When you try to export more than 100,000 code values from a code list using the export version 3 API, if you use the sort option, the export fails. (April 2022)
RDMNEX-7206	When you add value mappings in a crosswalk by selecting the deleted code values of a draft code list and then publish the code list, the API response ignores the deleted code values and displays the mappings for the crosswalk created using the draft code list. (December 2021)
RDMNEX-5516	Users assigned the Informatica Intelligent Cloud Services Reference 360 User role cannot use the List code value details API to retrieve the details of code values that also appear in hierarchies. (April 2021)
RDMNEX-5068 MDMN-38371	If you delete a code value and publish the change, when you add the same code value and publish the change, the History tab shows the delete event but does not show the create event. (December 2020)
MDMN-37736	When Mac OS users try to move a code value to a parent level that the hierarchy model does not support, the forbidden icon does not appear. (November 2020)
RDMNEX-4671	When you enter a very large number in an integer attribute field, Reference 360 might round the precision to the closest number that can be represented. For example, the value 33333333333333333333 might be rounded to 33333333333333300000. (September 2020)
RDMNEX-4204	When you delete code values used as reference data attributes in draft code lists, a warning message does not appear. (April 2020)

MDM - Reference 360 Extensions

Known issues

The following table describes known limitations in the Reference 360 extension:

Reference Number	Description
CNXT-1398	The Description attribute of the R360: Standard Cost Center Hierarchy reference data set doesn't integrate with the source systems. Workaround: You can manually add the description in Reference 360.

Informatica Global Customer Support

You can contact a Customer Support Center by telephone or online.

For online support, click **Submit Support Request** in Informatica Intelligent Cloud Services. You can also use Online Support to log a case. Online Support requires a login. You can request a login at <https://network.informatica.com/welcome>.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at <https://www.informatica.com/services-and-training/support-services/contact-us.html>.
