Read the *Informatica® MDM - Customer 360 Release Notes* to learn about known limitations and fixes associated with this release.

Installation and Upgrade

When you install or upgrade to Informatica MDM - Customer 360 version 10.5 HotFix 1, see the following documents:

- *Informatica MDM - Customer 360 10.5 HotFix 1 Installation and Configuration Guide*
- *Informatica MDM - Customer 360 10.5 HotFix 1 Release Notes*

For more information about product requirements and supported platforms, see the Product Availability Matrix: https://network.informatica.com/community/informatica-network/product-availability-matrices

Apache Log4j RCE Vulnerabilities

Customer 360 has updated Log4j to version 2.17.2 in the February 2022 release to remediate the known Log4j Remote Code Execution (RCE) vulnerabilities.

For more information, see the *Informatica MDM - Customer 360 Installation and Configuration Guide*.

10.5 HotFix 1 Known Limitations

The following table describes the known limitations:

Reference Number	Description
MDM-44489	Soap client call fails with stream closed exception for API due to a timeout issue. **Workaround:** Before upgrading Customer 360, set the timeout properties to 600000 in mdmapps-config.properties. You can set the timeout property for Customer 360 in the following path: `INFA_HOME/app/tcr/config/`
TCR-6731	The Submit button appears enabled in the drafted record even before the changes are applied.

10.5 Known Limitations

The following table describes the known limitations:

Reference Number	Description
TCR-6630	In the Customer portal, when you delete the default address or add a new address and save the changes on the registration form, the following error appears: `One or more values are not valid. Enter valid values and try again.`

TCR-6626	In the Portal Configuration tool, when you configure the filter property for a one-to-many field and set the field value containing ampersand (&), the following error appears:
	`{"errorCode":"PORTAL606","errorSummary":"BE's APi - Error on invoking BE's Entity API via Proxy","errorCauses":["Bad Request"],"status":"BAD_REQUEST","errorData":[\`
	`{"code":"SIP-50027","message":"SIP-50027: Can't parse Business Entity Query.","defaultMessage":"Bad Request"}`
	`],"path":"/infa-portal/`
	`proxy","host":"inwin201901","port":8080}`
	Workaround: The system doesn't support ampersand (&) in the field value. Ensure that you remove ampersand (&) and configure the filter property.

TCR-6625	In the Portal Configuration tool, you can configure different filter properties for a one-to-many field in multiple sections. The last filter property that you configure in a section overrides the filter properties in all the other sections.
TCR-6605	In the Customer Portal, you can't create or edit records through keyboard. When you try to edit using keyboard shortcuts, the focus always remains on the section instead of the field.
TCR-6522	In the Customer Portal user interface, when you enter an incorrect city in the address field, the address verification process doesn't display the error in the city field, doesn't highlight the field with the error.

Reference Number	Description
TCR-4828	Though the Customer 360 version is updated, it still points to the old installed location and Siperian home location.
TCR-5996	In the Customer 360 user interface, you can't use the Tab key to access the calendar icon on the **Dashboard** page.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:
