Cumulative Known Limitations.	2
Informatica Global Customer Support.	4

Read the Informatica® MDM Registry Edition Release Notes to learn about fixed limitations and known limitations of the release.

Installing or Upgrading MDM Registry Edition

Before you install or upgrade to MDM Registry Edition version 10.2 HotFix 1, see the following documents:

- *Informatica MDM Registry Edition 10.2 HotFix 1 Installation and Configuration Guide*
- *Informatica MDM Registry Edition 10.2 HotFix 1 Release Notes*

For more information about product requirements and supported platforms, see the Product Availability Matrix: <https://network.informatica.com/community/informatica-network/product-availability-matrices>.

10.2 HotFix 1 Fixed Limitations

The following table describes fixed limitations:

Reference Number	Description
IR-1780	When loading of the identity table with IBM Db2 fails, you get the following error message: <code>record id column is out of range</code>
IR-1596	Start the Synchronization Server and the updmulti utility and add multiple transactions using the No Source Access (NSA) method or trigger transactions. After you disconnect the database server connections, the Synchronization Server and the updmulti utility fail to restore the connections automatically.
IR-1595	The XML Search Server fails when the connection to the IBM Db2 database fails.

Reference Number	Description
IR-1590	If the connection between the Synchronization Server and Rulebase Server is lost or becomes inactive, the Synchronization Server fails to attempt and reconnect with the Rulebase Server.
IR-1577	The Log Grabber (loggrabr) utility does not display the <code>From</code> date in the <code>log.txt</code> file.
IR-1383	The XML Search Server fails when you run an XML search with multiple threads.

Cumulative Known Limitations

The following table describes known limitations that are carried forward from previous releases:

Reference Number	Description
IR-629	The latest standard population files are not compatible with the earlier versions of MDM Registry Edition.
IR-585	In an IBM DB2 UDB environment, the <code>SSADB_QUERY_TIMEOUT</code> environment variable does not function as expected.
IR-245	The MDM Registry Edition installation package for AIX does not include the MDM Registry Edition security framework. Workaround: Contact Informatica Global Customer Support for an updated installation package that includes the MDM Registry Edition security framework.
IIR-2845	The Relate client fails if the length of the Record Layout field value is greater than 250 characters.
IIR-2844	The Load-IDT job fails if the user source table has a CLOB data type column.
IIR-2828	A system load job might fail if the length of the <code>JOB-LIST</code> parameter value in the loader-definition section is greater than 65 characters. Workaround: A blank space is introduced at the beginning of every line when the <code>JOB-LIST</code> parameter value wraps to the next line. Remove the blank space at the beginning of every line, save the SDF file, and load the system.
IIR-2805	The <code>updsync</code> utility might stop immediately after you start it. Workaround: Remove the <code>stop</code> value in the <code>FIELD</code> column of the <code>IDS_UPD_SYNC_TXN</code> table and run the utility.
IIR-2799	When you perform a search that uses the <code>Filter</code> field in the <code>LWM_FIELDS</code> control, you get the following unclear error message: <code>NAME3V2 match failed 'Could not find field 'Filter<number>''</code> Workaround: Remove the <code>Filter</code> field from the <code>LWM_FIELDS</code> control because the <code>LWM_FIELDS</code> control does not support the <code>Filter</code> fields.
IIR-2493	After you enable a review option, such as <code>PREFERRED-RECORD-REVIEW</code> or <code>PRE-MERGE-REVIEW</code> , if you create a persistent ID by using the mass load utility, no review records are added in the review tables.

Reference Number	Description
IIR-2385	<p>When you install MDM Registry Edition in console mode, you cannot configure the name and port number for the Secure Search Server and Security Server.</p> <p>Workaround: By default, the installer configures the host name and the port number for the Secure Search Server and Security Server. If you want to change the default values, update the values of the following environment variables in the <MDM Registry Edition Installation Directory>\env\mdmres.bat file on Windows and the <MDM Registry Edition Installation Directory>/env/mdmres script on UNIX:</p> <ul style="list-style-type: none"> - SSA_SSEPORT - SSA_SSEHOST - SSA_SSPORT - SSA_SSHOST
IIR-2117	On Windows, if the installation of MDM Registry Edition in console mode fails, the <code>errorlevel</code> value does not change from 0.
IIR-2160	When you run a multi-search that passes file records in the <code>ids_search_start</code> function, only the first search in the multi-search runs.
IIR-1883	<p>You cannot create more than one system in the SDF Wizard.</p> <p>Workaround: Close the SDF Wizard and open it.</p>
IIR-1660	On DB2 UDB, if you set <code>DB2_COMPATIBILITY_VECTOR=ORA</code> , loading IDT fails during the trigger creation step.
IIR-1677	<p>If you start the Update Synchronizer before you deploy a system through the SDF Wizard, the system does not synchronize the data with the IDT.</p> <p>Workaround: Restart the Update Synchronizer.</p>
IIR-1556	<p>After you deploy a system by using the SDF Wizard, the system is not visible in the MDM Registry Edition Console.</p> <p>Workaround: Restart the MDM Registry Edition Console.</p>
IIR-1547	<p>When you create a system on a computer and deploy it on another computer by using the SDF Wizard, the deployment might fail.</p> <p>Workaround: Try to deploy the system on the computer on which you created the system.</p>
IIR-1539	When you use the Organization purpose for matching records, if the ID field of one record is a subset of the ID field of another record, the ID fields get 100% match score.
IIR-1524	Concatenating multiple source fields into a single IDT field might create a line that is longer than the maximum length of 255 bytes. Loading such SDF fails.
IIR-1486	<p>On Linux AMD64, you can incorrectly use the GNU Compiler for Java (GCJ) to launch the SDF wizard and as a result, the JVM does not respond correctly.</p> <p>Workaround: Include the path to the appropriate Oracle JRE in the PATH variable.</p>
IIR-1035	<p>When an Informatica Data Director application accesses Security Server or Secure Search Server, you might get the following error message:</p> <pre>java.lang.OutOfMemoryError</pre> <p>Workaround: Set the <code>JAVA_OPTS</code> environment variable to increase the memory available for the Java processes. For example:</p> <pre>JAVA_OPTS=-Xms512m -Xmx1024m -XX:MaxPermSize=512m</pre>

Reference Number	Description
IIR-994	Search fails and displays the message NAME3V2 ssan3_match_encoded call failed 'Missing matching bracket'. Workaround: Limit Controls parameters to 256 characters.
IIR-586	When you upgrade to the latest version of MDM Registry Edition from an earlier version, the upgrade process fails. Workaround: Install MDM Registry Edition in a new directory.
IIR-584	In the Job Editor, the Execute SQL step lists ssa as one of the supported logon types. You cannot use this logon type because the Execute SQL step does not use the database dictionaries.
IIR-578	The <code>-y</code> option in <code>Dupfinder</code> and <code>Relate</code> does not show flattened and repeating fields correctly.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:

<https://www.informatica.com/services-and-training/customer-success-services/contact-us.html>.

To find online support resources on the Informatica Network, visit <https://network.informatica.com> and select the eSupport option.
