Preface

The *Edge Data Streaming Release Guide* lists new features and enhancements, behavior changes between versions, and tasks you might need to perform after you upgrade from a previous version. The *Edge Data Streaming Release Guide* is written for all types of users who are interested in the new features and changed behavior. This guide assumes that you have knowledge of the features for which you are responsible.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Network

The Informatica Network is the gateway to many resources, including the Informatica Knowledge Base and Informatica Global Customer Support. To enter the Informatica Network, visit <https://network.informatica.com>.

As an Informatica Network member, you have the following options:

- Search the Knowledge Base for product resources.
- View product availability information.
- Create and review your support cases.
- Find your local Informatica User Group Network and collaborate with your peers.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit <https://search.informatica.com>. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit <https://docs.informatica.com>.

Informatica maintains documentation for many products on the Informatica Knowledge Base in addition to the Documentation Portal. If you cannot find documentation for your product or product version on the Documentation Portal, search the Knowledge Base at <https://search.informatica.com>.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Product Availability Matrices

Product Availability Matrices (PAMs) indicate the versions of the operating systems, databases, and types of data sources and targets that a product release supports. You can browse the Informatica PAMs at <https://network.informatica.com/community/informatica-network/product-availability-matrices>.

Informatica Velocity

Informatica Velocity is a collection of tips and best practices developed by Informatica Professional Services and based on real-world experiences from hundreds of data management projects. Informatica Velocity represents the collective knowledge of Informatica consultants who work with organizations around the world to plan, develop, deploy, and maintain successful data management solutions.

You can find Informatica Velocity resources at <http://velocity.informatica.com>. If you have questions, comments, or ideas about Informatica Velocity, contact Informatica Professional Services at ips@informatica.com.

Informatica Marketplace

The Informatica Marketplace is a forum where you can find solutions that extend and enhance your Informatica implementations. Leverage any of the hundreds of solutions from Informatica developers and partners on the Marketplace to improve your productivity and speed up time to implementation on your projects. You can find the Informatica Marketplace at <https://marketplace.informatica.com>.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:

<https://www.informatica.com/services-and-training/customer-success-services/contact-us.html>.

To find online support resources on the Informatica Network, visit <https://network.informatica.com> and select the eSupport option.

CHAPTER 1

New Features and Changes in Version 2.5.0

This chapter includes the following topics:

- [New Features \(2.5.0\), 7](#)
- [Changes \(2.5.0\), 7](#)

New Features (2.5.0)

This section describes the new features in Edge Data Streaming 2.5.0.

Amazon S3 Target Services

Effective in version 2.5.0, you can use Amazon S3 target services to write data to an Amazon S3 target.

Amazon S3 data objects that you want to write to an Amazon S3 target are stored in Amazon S3 buckets. You can have one or more buckets. An Amazon S3 data object is the physical data object that represents data based on an Amazon S3 resource.

Amazon S3 target services require Hadoop client version 3.1.0.

For more information on Amazon S3 target services, see the *Informatica Edge Data Streaming 2.5.0 User Guide*.

Changes (2.5.0)

This section describes the changes in Edge Data Streaming 2.5.0.

OpenJDK

Effective in version 2.5.0, the installer packages Azul OpenJDK. The supported Java version is Azul OpenJDK 1.8.0_192.

Previously, the installer packaged Oracle Java and Edge Data Streaming used Oracle Java.

CHAPTER 2

New Features and Enhancements in Version 2.4.0

This chapter includes the following topic:

- [New Features and Enhancements in Version 2.4.0, 8](#)

New Features and Enhancements in Version 2.4.0

This section describes new features and enhancements in Edge Data Streaming 2.4.0.

Product Name Change

The product Vibe Data Stream for Machine Data is renamed to Edge Data Streaming.

Plug-ins

This section describes new features and enhancements to plug-ins in Edge Data Streaming.

Target Services

Effective in 2.4.0, EDS includes the following new target service and enhancements:

EventHub Target Service

You can use the EventHub target service to write data to Microsoft Azure Event Hubs data streaming platform and event ingestion service.

Kafka Target Service

You can read from or write to a Kafka cluster that is configured for Kerberos authentication.

HDFS Target Service

When you enable forceful synchronization, you can forcefully synchronise the data after a specific time interval of when a buffer size is reached. The event that occurs first triggers the forceful synchronization.

For more information about the target services, see the "Edge Data Streaming Entity Types" chapter in the *Informatica Edge Data Streaming 2.4.0 User Guide*.

CHAPTER 3

New Features and Enhancements in Version 2.3.2

This chapter includes the following topic:

- [New Features and Enhancements in Version 2.3.2, 9](#)

New Features and Enhancements in Version 2.3.2

This section describes new features and enhancements in Vibe Data Stream for Machine Data 2.3.2.

HDFS Target Services

Version 2.3.2 includes support for the following HDFS target services:

Target Service	Version
Cloudera CDH	5.11
Hortonworks	2.5, 2.6
Kafka	9.x, 10.x
MapR	5.2

CHAPTER 4

New Features and Enhancements in Version 2.3.1

This chapter includes the following topic:

- [New Features and Enhancements in Version 2.3.1, 10](#)

New Features and Enhancements in Version 2.3.1

This section describes new features and enhancements in Vibe Data Stream for Machine Data 2.3.1.

Plug-ins

This section describes new features and enhancements to plug-ins in Edge Data Streaming.

Source Services

Effective in 2.3.1, VDS includes the OPC DA source service that you can use to collect data from OPC servers.

For more information about the OPC DA source service, see the *Informatica Vibe Data Stream 2.3.1 for Machine Data User Guide*.

CHAPTER 5

New Features and Enhancements in Version 2.3.0

This chapter includes the following topic:

- [New Features and Enhancements in Version 2.3.0, 11](#)

New Features and Enhancements in Version 2.3.0

This section describes new features and enhancements in Vibe Data Stream for Machine Data 2.3.0.

Installer

This section describes the enhanced installation options for Edge Data Streaming.

Effective in version 2.3.0, VDS supports one installation option. You can use the VDS installer to install the VDS components on an existing installation of Informatica PowerCenter®.

For more information, see the *Informatica Vibe Data Stream for Machine Data Installation and Configuration Guide*.

Upgrade Option

You can use the upgrade scripts to import data flows and node groups from version 2.2.0 to version 2.3.0.

For more information, see the *Informatica Vibe Data Stream for Machine Data Upgrade Guide*.

Licensing

Vibe Data Stream 2.3.0 requires you to get a new license.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Security

This section describes the enhancements to the security feature.

Effective in version 2.3.0, you can configure Kerberos authentication between the Administrator Daemon and the Administrator tool when the Informatica domain uses SSL certificates to secure the domain. In this scenario, the Informatica domain need not use Kerberos network authentication.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Representational State Transfer (REST) API

This section describes the new Representational State Transfer (REST) API feature.

Effective in version 2.3.0, you can use the REST APIs to perform operation related to data flow and entities in VDS.

Use the REST APIs to perform the following tasks:

1. Create, update, retrieve, delete, deploy, and undeploy specific and all data flows.
2. Create, update, retrieve, delete, deploy, and undeploy source services and target services.
3. Create, update, retrieve, and delete connections and links.
4. Create, update, retrieve, and delete aggregators and transformations.
5. Create, update, retrieve, and delete VDS Nodes and node groups.
6. Create, update, retrieve, and delete parameters.
7. Retrieve plug-ins.

Vibe Data Stream Service

This section describes enhancements to the Vibe Data Stream Service.

Create the Vibe Data Stream Service

Effective in version 2.3.0, you can use the Informatica command line program to create the Vibe Data Stream Service.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Data Connections

This section describes the enhancements to the data connections.

Effective in version 2.3.0, you can configure security for the Ultra Messaging data connection.

Topic Sharding

When you choose the Ultra Messaging data connection, you can specify the topic name for the transport on which the source service publishes data. This topic is known as well-known topic. If you create custom source services or transformations, you can partition or shard events to separate the processing of large event streams. When you configure the Ultra Messaging data connection, you can specify comma-separated transport topic names.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Ultra Messaging Persistence

This section describes the enhancements to the Ultra Messaging Persistence (UMP) messaging mode in Edge Data Streaming.

Effective in version 2.3.0, when you configure the Ultra Messaging data connection you can select the internal persistence store.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Plug-ins

This section describes new features and enhancements to plug-ins in Edge Data Streaming.

Source Services

Effective in 2.3.0, VDS includes the following new source service and enhancement:

JMS Source Service

You can use a JMS (Java Messaging Service) source service to read data from a JMS provider.

Retry on Failure

You can use properties to configure the number of times the source service tries to open the source or read from the source and the time in seconds between retries.

Target Service

Effective in 2.3.0, VDS includes the following new target services and enhancement:

JMS Target Service

You can use a JMS (Java Messaging Service) target service to write data to a JMS provider.

Kafka Target Service

Use a Kafka target service to write data to an Apache Kafka publish-subscribe messaging system broker.

Retry on Failure

You can use properties to configure the number of times the target service tries to write to the source and the time in seconds between retries.

Transformations

Effective in version 2.3.0, VDS includes the following enhancement:

Insert String Transformation Type

You can use the `#TIMEUUID` and `#RANDOMUUID` tokens to append unique identifiers to the input data.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Data Flows

This section describes new features and enhancements to data flows.

Clone Data Flows

Effective in version 2.3.0, you can create an exact copy of a data flow by cloning it. You can also create copies of entities in a data flow and copy entities to other data flows.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

CHAPTER 6

New Features and Enhancements in Version 2.2.0

This chapter includes the following topic:

- [New Features and Enhancements in Version 2.2.0, 14](#)

New Features and Enhancements in Version 2.2.0

This section describes new features and enhancements in Vibe Data Stream for Machine Data 2.2.0.

Installer

This section describes the new and enhanced installation options for Edge Data Streaming.

Express Installation

You can use the express installation to install the VDS components on one machine with default configuration.

For more information, see the *Informatica Vibe Data Stream for Machine Data Installation and Configuration Guide*.

Custom Installation

You can use the custom installation to install the VDS components on different machines or on an existing installation of Informatica PowerCenter. You can configure high availability for the VDS components and multiple database support. You can set up secure communication between the VDS components, storage, configuration, and authentication.

For more information, see the *Informatica Vibe Data Stream for Machine Data Installation and Configuration Guide*.

Upgrade Option

You can use the upgrade option in the installer to upgrade from version 2.1.0 to version 2.2.0.

For more information, see the *Informatica Vibe Data Stream for Machine Data Upgrade Guide*.

Licensing

Vibe Data Stream 2.2.0 requires you to get a new license.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Security

This section describes the security feature in Edge Data Streaming.

Effective in version 2.2.0, you can enable security for VDS if security is configured for the domain of Informatica PowerCenter and if the domain uses secure network authentication to authenticate users. The type of user authentication you can configure for VDS depends on the type of user authentication that is configured for the Informatica domain. The type of user authentication you can configure for VDS depends on the type of user authentication that is configured for the Informatica domain.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Databases

This section describes enhancements to databases in Edge Data Streaming.

Database Support

Effective in version 2.2.0, the Vibe Data Stream Service stores information in the H2 database if you use the express installation to install VDS. If you use the custom installation to install VDS, you can configure one of the following databases for information storage:

- IBM DB2
- Microsoft SQL Server
- Oracle
- Sybase

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Administrator Daemon H2 Database Backup

Effective in version 2.2.0, you can configure backup of the Administrator Daemon H2 database.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

High Availability

This section describes the high availability feature in Edge Data Streaming.

Effective in version 2.2.0, you can configure high availability for the Administrator Daemon, Apache ZooKeeper, the VDS Nodes, and the data flows.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Disaster Recovery

This section describes the disaster recovery feature in Edge Data Streaming.

Effective in version 2.2.0, in the event of a catastrophe you can recover the VDS components and data flows from a disaster recovery site and resume normal operations.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Vibe Data Stream User Interface

This section describes the new features and enhancements to the Edge Data Streaming user interface.

Vibe Data Stream

Effective in version 2.2.0, Vibe Data Stream tab includes the following new tabs:

- **Node Group Management.** Use the **Node Group Management** tab to work with node groups.
- **Parameter Management.** Use the **Parameter Management** tab to set the values for parameters.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Grid View

Effective in version 2.2.0, the **Monitoring** tab includes the **Grid** view. You can view a list of data flows, nodes and entities in the VDS deployment in the **Grid** view.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Data Connections

This section describes the data connection feature in Edge Data Streaming.

Effective in version 2.2.0, you can choose one of the following data connections when you design data flow:

Ultra Messaging Data Connection

You can choose the Ultra Messaging data connection when you want to send data to one or more target services in a LAN.

WebSocket Data Connection

You can choose the WebSocket data connection in a data flow in the following scenarios:

- To transport data over a firewall.
- To aggregate data before writing to the data target.
- For secure data transfer.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Ultra Messaging Persistence

This section describes the enhancements to the messaging mode in Edge Data Streaming.

Effective in version 2.2.0, VDS includes support for Ultra Messaging Persistence (UMP). When you configure the Ultra Messaging data connection, you can configure the persistence messaging mode. The source services use persistence to distribute data.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Plug-ins

This section describes new features and enhancements to plug-ins in Edge Data Streaming.

Aggregator

Effective in version 2.2.0, you can use aggregators to collect data from source services or other aggregators and publish the data to target services or other aggregators.

Source Services

File Source Service

The Flat File source service has been split into the following source services:

- File Source
- Static File Source

JSON File Source Service

VDS does not include the JSON File source service.

HTTP and WebSocket Source Service

The HTTP and WebSocket source service has been split into the following source services:

- HTTP
- WebSocket

Syslog Source Service

The Syslog source service has been split into the following source services:

- Syslog TCP
- Syslog UDP
- Syslog UDS

Ultra Messaging Source Service

Effective in version 2.2.0, VDS includes an Ultra Messaging source service to read data from a UM source application.

Target Service

Effective in 2.2.0, VDS includes the following target services:

File Target Service

You can use a File target service to write data to a file.

HTTP Target Service

You can use an HTTP target service to write data to an HTTP server through HTTP POST requests.

WebSocket Target Service

You can use a WebSocket target service type to write data to a WebSocket server through WebSocket messages.

HDFS Target Service

You can configure an HDFS target service to write to HDFS that has Kerberos enabled. You can also configure HDFS to write to a highly available HDFS.

Transformations

Effective in version 2.2.0, VDS includes the following target services:

Compress Data Transformation Type

You can use the Compress Data transformation to compress data sent by source services

Decompress Data Transformation Type

You can use the Decompress Data transformation to decompress data sent received by target services.

Unstructured Data Parser

Use the Unstructured Data Parser transformation to parse log files and other files.

Parameters for Entity Properties

Effective in version 2.2.0, you can create parameters for entity properties to provide flexibility each time you configure entities. You can also configure secure parameters for passwords and other secure fields in the entity properties.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Plug-in Utilities

This section describes new utilities to manage plug-ins in Edge Data Streaming.

Custom Entities from Maven Archetypes

Effective in version 2.2.0, you can use the Maven archetypes to create entities, such as source services, target services, and transformations. The Maven archetypes are packaged with the VDS APIs. You can use these archetypes to create custom entity types in an Eclipse environment.

For more information, see the *Informatica Vibe Data Stream for Machine Data Developer Guide*.

Data Flows

This section describes new features and enhancements to data flows in Edge Data Streaming.

Export and Import Data Flows

Effective in version 2.2.0, you can use the Informatica command line program to export and import data flows. You can export data flows that you create so that other users can import them and use them. You can also import data flows after changes in configuration or when you want to recover data flows after a corruption.

Undeploy and Deploy All Data Flows

Effective in version 2.2.0, you can undeploy all data flows when you want to refresh data flows after a change in configuration. You can deploy all data flows to recover the data and the states of the data flow.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Node Groups

This section describes the Node group features in Edge Data Streaming.

Node Groups

Effective in version 2.2.0, you can group multiple VDS Nodes in groups to simplify working with them. You can create the following types of groups:

- Normal Node Group. You can manually add VDS Nodes to a Normal Node group or import from a CSV file.
- Dynamic Node Group. You can define a regular expression that describes the names of VDS Nodes to add to the group.

Export and Import Node Groups

Effective in version 2.2.0, you can use the Informatica command line program to export and import node groups.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Monitoring

This section describes the new monitoring features and enhancements to Edge Data Streaming.

Grid View

Effective in version 2.2.0, you can view a list of data flows, nodes and entities in the VDS deployment in the **Grid** view of the **Monitoring** tab. You can view data flows, nodes, and entities. You can also view entity statistics and charts.

Entity Charts

Effective in version 2.2.0, you can view charts for source service and target service statistics in the **Charts** panel of the **Grid** view.

Filters

Effective in version 2.2.0, you can apply a filter to drill down to specific information on VDS data flows, nodes, and entities. When you view the state or information of any component, you can use filters to view related components.

Statistics

Effective in version 2.2.0, you can view statistics for the following component and entities:

- VDS Node
- Data flows
- Aggregator
- Source service, target service, and transformation types

User Preferences

Effective in version 2.2.0, the settings that you make in the **Grid** view of the **Monitoring** tab are preserved across different sessions. The following preferences are preserved across different sessions:

- Table preferences
- Chart preferences
- Filter preferences
- Page preferences

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

Alerts

This section describes the new alerting feature in Edge Data Streaming.

Effective in version 2.2.0, VDS generates alerts when a VDS Node, a source service, or a target service shut down abnormally. The Administrator Daemon publishes the alerts on a UM topic named `/umsm/api`.

For more information, see the *Informatica Vibe Data Stream for Machine Data User Guide*.

CHAPTER 7

New Features and Enhancements

This chapter includes the following topic:

- [New Features and Enhancements in Version 2.1.0, 20](#)

New Features and Enhancements in Version 2.1.0

This section describes new features and enhancements in Vibe Data Stream for Machine Data 2.1.0.

Installer

This section describes the new and enhanced installer for Edge Data Streaming.

Typical Install Option

All required components are installed by default. The typical install option also installs Apache Zookeeper and adds it as a service on Microsoft Windows. On Linux, Apache Zookeeper is monitored and restarted by the process monitoring program.

Custom Install Option

You can choose the Edge Data Streaming components that you want to install. You can configure Edge Data Streaming on multi-homed hosts.

Remote Install on Linux

You can perform remote install and uninstall, and start or stop the Edge Data Streaming node remotely on Linux.

Licensing

The product license is now available as an Enterprise edition and a Free edition.

The Enterprise edition has the following features:

- High availability configuration for VDS entities
- Validity for an extended time period
- Data usage each day based on your requirements

The Free edition has the following features:

- Unlimited data usage each day
- Validity for a limited time period

The product license can be updated from the Administrator tool.

Security

This section describes new security features and enhancements to Edge Data Streaming.

HTTPS for Administrator Tool

You can enable options during install to secure communications for the Administrator Tool.

Data Storage

Secure fields in custom entities are stored in an encrypted format when enabled in the Edge Data Streaming plug-in XML file.

Communication

You can enable secure communication for the Administrator Daemon, Administrator tool, and the Edge Data Streaming Node. If you have installed Edge Data Streaming in secure mode, the secure fields and the configuration details in custom entities are securely communicated using encryption over UM or HTTPS and then encrypted and stored in the database.

Plug-ins

This section describes new sources, targets, and transformations in Edge Data Streaming.

Source Service

HTTP/HTTPS/WS/WSS

The HTTP and Websocket (WSS) source service type receives data from a source that sends data through HTTP POST requests or WSS messages.

HDFS Target Services

Version 2.1.0 includes support for the following HDFS target services:

- Amazon Kinesis
- MapR 3.0.1
- Hortonworks 2.0
- Cloudera CDH5

Target Service

Ultra Messaging target

Use an ultra messaging target service to stream data to Ultra Messaging.

Plug-in Utilities

This section describes new and enhanced utilities to manage plug-ins in Edge Data Streaming.

Register and Unregister Plug-in

You can register or unregister custom plug-ins from the Administrator Daemon.

Upgrade and Prepare for Schema Changes

You can make schema changes to custom entities with prepare and upgrade commands. Use the prepare command to generate a CSV file for a specific entity type with all the fields for all entities. You can add or edit the fields in this CSV file and then run the upgrade command to update the fields to the plug-in.

The upgrade command redeploys data flows that were deployed at the time of upgrade.

UM Streaming

Source services can use UM Streaming option instead of UM Load Balancing option to distribute data.

VDS as an Amazon Machine Interface

Edge Data Streaming 2.1.0 is available as a pre-configured Vibe Data Stream Amazon Machine Image (AMI).

VDS on Informatica Marketplace

Edge Data Streaming 2.1.0 is available for download from Informatica Marketplace.

For more information, see <https://community.informatica.com/community/marketplace/>.

VDS Nodes

You can add or import multiple nodes as a CSV file. You can also copy and paste node names in a CSV format into the Administrator tool.

UM Custom Parameters

Use advanced configuration options to set or override custom parameters for a source or target entity.

Configurable Event Size

The maximum event size of the data sent from source services to target services can be configured from the Administrator tool. Messages from the source is triggered when the value specified in the Maximum Event Size option is met.

The event size defines the maximum length of data that a source service can read or receive at a time, and it determines the performance of a source service. The greater the event size, the more the messages that a source service can include in an event.

Browser Compatibility

Edge Data Streaming 2.1.0 is certified on the latest version of Mozilla Firefox.
